

Hotel Reservation System

Objective:

- **The Hotel Reservation system** will provide service to on-line customers, employee, and an administrator. Online customers can make searches, reservations and cancel an existing reservation on the hotel reservation's web site. Administrator can add/update the hotel and the room information approve/disapprove a new employee account application and generate a monthly occupancy rate report for each hotel.

Existing System:

- This existing system is not providing secure registration and profile management of all the users properly.
- This manual system gives us very less security for saving data and some data may be lost due to mismanagement.
- The system is giving only less memory usage for the users.

Proposed System:

The development of this new system contains the following activities, which try to automate the entire process keeping in the view of database integration approach.

- This system maintains user's personal info, address, and contact details.
- User friendliness is provided in the application with various controls provided by system rich user interface.
- This system makes the overall project management much easier and flexible.
- Various classes have been used for maintaining the details of all the users and catalog.
- Authentication is provided for this application. Only registered users can access.
- Report generation feature is provided used to generate different kind of reports.
- This system is providing more memory for the users to maintain data.
- This system is providing accessibility control to data with respect to users.

Number of Modules:

The system after careful analysis has been identified to be presented with the following modules:

1. Authentication and Security Module
2. Admin Module
3. Employee Module.
4. Hotel Rooms Management Module.
5. Service Management Module.
6. Reports Module.

1. Authentication and Security Module
