The Teaching Brain Vanessa Rodriguez,Michelle Fitzpatrick,2011-05-10 A significant contribution to understanding the interaction among teachers students the environment and the content of learning Herbert Kohl education advocate and author What is at work in the mind of a five year old explaining the game of tag to a new friend What is going on in the head of a thirty five year old parent showing a first grader how to button a coat And what exactly is happening in the brain of a sixty five year old professor discussing statistics with a room full of graduate students While research about the nature and science of learning abounds shockingly few insights into how and why humans teach have emerged until now Countering the dated yet widely held presumption that teaching is simply the transfer of knowledge from one person to another The Teaching Brain weaves together scientific research and real life examples to show that teaching is a dynamic interaction and an evolutionary cognitive skill that develops from birth to adulthood With engaging accessible prose Harvard researcher Vanessa Rodriguez reveals what it actually takes to become an expert teacher At a time when all sides of the teaching debate tirelessly seek to define good teaching or even how to build a better teacher The Teaching Brain upends the misguided premises for how we measure the success of teachers A thoughtful analysis of current educational paradigms Rodriguez s case for altering pedagogy to match the fluctuating dynamic forces in the classroom is both convincing and steeped in common sense Publishers Weekly
