have become omnipresent commodities within our environment While for a large variety of these systems such as transportation systems nuclear or chemical plants or medical systems their relation to safety is obvious we often do not reflect that others are as directly related to risks concerning harm done to persons or matter as for example elevator control or mobile phones At least we are not aware of the risk in our daily use of them Safecomp as a community and a conference series has accompanied this development for 30 years up to Safecomp 2009 which was the 28th of the series During this time the topics and methods as well as the community have undergone changes These changes reflect the requirements of the above mentioned ubiquitous presence of safety related systems Safecomp has always encouraged and will further encourage academia and industry to share and exchange their ideas and experiences After 30 years we as the organizers of Safecomp 2009 found it imperative to take stock which methods found their way into the application areas which new approaches need to be checked for their practical applicability As different application domains developed their own approaches over the previous decades we tried to attract people with different backgrounds for this conference though the years 2008 and 2009 were not easy with regard to the overall global economic situation we succeeded with this goal
