**The Human Origins** Valentin Matcas,2016-04-20 There is more to the human origins development intelligence and civilization than the epic debate Creationism versus Evolution simply because there is more to the human condition than what authorities and ideologies want you to believe Therefore when you study the human origins you have to search beyond the moment when the first humans had detached from the firmament or previous species since there are other significant events in humanity s lifespan and achievement defining its specific timeline While you have to study everything otherwise you risk understanding these significant events only from simplistic empirical or ideological perspectives ending up learning what you already know while following the crowd throughout unending debates Since you want the accurate truth because you already know all theories beliefs speculations and debates regarding the human origins And this is why when you study the human origins you expect to understand everything about the origins of life the nature and origins of this world the nature of the human higher self and intelligence the origins and debut of the human consciousness and human intelligent reasoning along with all details related to the Creator of this entire world of Life and of humanity Additionally it is relevant to know how all these affect you personally and how they affect your family your genetic line and your nation how your family and genetic line originate where and how it happened under what circumstances and with what status and privileges for you for your family for your nation and for the humankind And this is exactly what we cover throughout this book in all details and from all perspectives This book studies the human origins along with the origins of life human intelligence human species human development human society human current civilization along with various past civilizations of Earth integrating humans their origins and their original and current conditions in an elaborate comprehensive model

**Making Starships and Stargates** James F. Woodward,2012-12-15 To create the exotic materials and technologies needed to make stargates and warp drives is the holy grail of advanced propulsion A less ambitious but nonetheless revolutionary goal is finding a way to accelerate a spaceship without having to lug along a gargantuan reservoir of fuel that you blow out a tailpipe Tethers and solar sails are conventional realizations of the basic idea There may now be a way to achieve these lofty objectives Making Starships and Stargates will have three parts The first will deal with information

about the theories of relativity needed to understand the predictions of the effects that make possible the propulsion techniques and an explanation of those techniques The second will deal with experimental investigations into the feasibility of the predicted effects that is do the effects exist and can they be applied to propulsion The third part of the book the most speculative will examine the question what physics is needed if we are to make wormholes and warp drives Is such physics plausible And how might we go about actually building such devices This book pulls all of that material together from various sources updates and revises it and presents it in a coherent form so that those interested will be able to find everything of relevance all in one place

**Test of FAITH: Spiritual Journeys with Scientists** Ruth Bancewicz, 2009-08 Is God a delusion Are science and Christian faith incompatible Ten scientists tell their stories There is a popular myth at large in both modern society and in many churches According to this myth science and Christianity have been engaged in a long battle over the centuries For many secularists this means that we must embrace science and reject religion whilst for some Christians it means the exact opposite But are science and Christian faith really in a conflict In this book ten respected scientists share their life stories and their reflections on science and faith What led them to become scientists Why did they embrace Christianity And how do they relate their religious beliefs to the science that they do in the lab The stories that they tell help us to see that when it comes to answering some of life's big questions we do well to listen for the insights from both science and faith Contributors include Dr Francis Collins Professor Alister McGrath Dr Ard Louis Dr Jennifer Wiseman Professor Bill Newsome Rev Dr John Polkinghorne Rev Dr Alasdair Coles Dr Deborah B Haarsma Professor Rosalind Picard Professor John Bryant The level of human insight matching scientific expertise in these chapters is high and they have left me feeling that here are folk with whom as a mere theologian I would love to spend some time I hope other readers will enjoy this set of testimonies as much as I have done Professor J I Packer Regent College Vancouver Canada Just the book to give to anyone who thinks science disproves religion Powerful testimonies from ten distinguished scientists reveal why their faith in God enhances their research A very worthwhile read Professor Gordon Wenham Trinity College Bristol UK These short readable accounts by ten scientists are a pleasure to read and an inspiration to anyone who seeks to integrate Christian belief and science Each one is a specialist in a different scientific discipline and they tell very different life stories yet they all affirm the Christian privilege of scientific discovery and understanding Professor Keith Fox School of Biological Sciences

Osterlind,2019-01-24 Quantitative thinking is our inclination to view natural and everyday phenomena through a lens of measurable events with forecasts odds predictions and likelihood playing a dominant part The Error of Truth recounts the astonishing and unexpected tale of how quantitative thinking came to be and its rise to primacy in the nineteenth and early twentieth centuries Additionally it considers how seeing the world through a quantitative lens has shaped our perception of the world we live in and explores the lives of the individuals behind its early establishment This worldview was unlike anything humankind had before and it came about because of a momentous human achievement we had learned how to measure uncertainty Probability as a science was conceptualised As a result of probability theory we now had correlations reliable predictions regressions the bellshaped curve for studying social phenomena and the psychometrics of educational testing Significantly these developments happened during a relatively short period in world history roughly the 130 year period from 1790 to 1920 from about the close of the Napoleonic era through the Enlightenment and the Industrial Revolutions to the end of World War I At which time transportation had advanced rapidly due to the invention of the steam engine and literacy rates had increased exponentially This brief period in time was ready for fresh intellectual activity and it gave a kind of impetus for the probability inventions Quantification is now everywhere in our daily lives such as in the ubiquitous microchip in smartphones cars and appliances in the Bayesian logic of artificial intelligence as well as applications in business engineering medicine economics and elsewhere Probability is the foundation of quantitative thinking The Error of Truth tells its story when why and how it happened
