BIOTECHNOLOGY Sameer S. Bhagyawant & Nidhi Srivastava,2015-03-01 Plant science is one of the fundamental subjects to begin with Biotechnology has given it a force to get modified into an applied field known as plant biotechnology Plant

tissue culture is widely used for direct commercial applications Metabolic engineering of plants promises to create new opportunities in agriculture environmental applications production of chemicals and even medicine Therefore molecular techniques encompassing the use of plants are being focused in this era The main aim of this book is to provide readers about the applied aspects of plant biotechnology

Molecular Marker Systems in Plant Breeding and Crop Improvement Horst Lörz, Gerhard Wenzel, 2008-11-01 Successful release of new and better crop varieties increasingly requires genomics and molecular biology This volume presents basic information on plant molecular marker techniques from marker location up to gene cloning The text includes a description of technical approaches in genome analysis such as comparison of marker systems positional cloning and array techniques in 19 crop plants A special section focuses on converting this knowledge into general and specific breeding strategies particularly in relation to biotic stress Theory and practice of marker assisted selection for QTL gene pyramiding and the future of MAS are summarized and discussed for maize wheat and soybean Furthermore approaches in silviculture on the examples of Fagus Populus Eucalyptus Picea and Abies are presented The volume ends with a comprehensive review of the patents relevant for using molecular markers and marker assisted selection

Plant Biotechnology Agnès Ricroch, Surinder Chopra, Shelby J. Fleischer, 2014-07-11 Written in easy to follow language the book presents cutting edge agriculturally relevant plant biotechnologies and applications in a manner that is accessible to all This book introduces the scope and method of plant biotechnologies and molecular breeding within the context of environmental analysis and assessment a diminishing supply of productive arable land scarce water resources and climate change Authors who have studied how agro ecosystems have changed during the first decade and a half of commercial deployment review effects and stress needs that must be considered to make these tools sustainable

DNA-based markers in plants Ronald L. Phillips, I. K. Vasil, 1994 Until very recently genetic maps of higher plants were based almost entirely on morphological and biochemical traits These maps are rapidly being replaced and or supplemented with DNA based marker maps based on the use of powerful new molecular techniques The new high precision maps can be developed with comparative ease and rapidity They have a much higher density of markers which allows revelation of more and more restricted segments of the genome One of the many revolutionary aspects of this technology is that linkage between molecular markers and traits of interest often can be detected in a single cross The ability to hybridize probe after probe to the DNA of the same individuals of a segregating population allows one to pursue the analysis until linkage becomes evident With morphological and biochemical markers used previously a separate cross was required to test linkage with each new marker It was seldom that more than three markers could be tested for linkage with the trait of interest in a single cross because of viability problems With the new techniques described in this volume a new gene could be placed on the linkage map within a few days instead of the much longer time required with the previous techniques In this book a group of leading researchers provide background information and the latest versions of DNA based marker maps for a variety of important

crops These maps illustrate the state of the art today The progress made during the past five years has been truly phenomenal
