This book puts together all aspects of valorization of vegetable and fruit wastes (VFWs) into different biocommodities and platform chemicals using fermentation and non fermentation processes. VFWs are a special group of solid waste biomass that needs to be characterized to understand the nature of applications as raw materials and to propose an appropriate methodology for bioprocessing into value added commodities. VFWs provide favorable conditions for the growth of microorganisms and this opens up great opportunities for their use in fermentation processes. For example, VFWs can be used as a solid support, carbon and nutrient source in fermentation for the production of a variety of value added biocommodities such as enzymes, single cell proteins, bioadsorbents, phenolic, bioactive compounds, aroma and flavor.
