

The background of the entire slide is a photograph of four skydivers in yellow jumpsuits and red helmets, falling in a vertical line against a bright blue sky filled with white, fluffy clouds. The skydivers are positioned on the right side of the frame, with the one at the bottom being the most prominent.

Handbook of Creativity John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views *Teachers' Guide to Child Development* Arch Oliver Heck, California. the primary purpose of meeting the country's basic economic and social needs. Immediate key measures taken after the revolution included free education up to higher levels and free health services. In only a couple of decades, Third World diseases were defeated and a First World health profile was achieved. In the sciences, support and collaboration was sought and welcomed from both Soviet and western countries. Moreover, due to the backward position of the Soviet Union in genetics and molecular biology in the early 1970s, Cuban scientists were trained in these fields mainly by Italian biologists. In the following decade, initially relying on contacts with American and Finnish specialists, Cuban biologists and physicians built a large industrial biotechnology complex to produce and commercialize Cuban-made and often invented medicines and vaccines. In the early 1990s, the sudden collapse of the Soviet Union and the socialist market created an unprecedented challenge. Yet Cuba's scientific system substantially resiled despite unavoidable setbacks. This crisis was faced by confirming and reinforcing government support for biotechnology with the result that today Cuba excels at a global level in the typical capital-intensive field of biotechnology. While this book is especially devoted to historians of science and technology and to biotechnologists, it is of interest to the general public.
