

Pile Cap Design Guide

Introduction to Pile Cap Design - Loads

- The guide considers pile caps that are loaded by columns supported directly at the centroid of the pile cap
- All loads must be applied to the pile cap at the column-to-pile cap interface
- Any combination of gravity loads (i.e., dead, live, or live roof) or environmental loads (i.e., seismic, wind, rain, or snow)
- Tabulated designs and example problems presented in this guide consider only the effects of dead loads, live loads, wind loads, and seismic loads.
- In cases where the designer desires to include the effects of other loads, these additional loads can conservatively be considered as live loads without changing the methodologies presented herein
- ASD is commonly used by geotechnical engineers and LRFD is used almost exclusively by engineers designing reinforced concrete pile caps. Both nominal and factored loads are presented throughout this design guide.
