Planning For Computer Integrated Manufacturing Implementation:

Computer Integrated Manufacturing (Iccim '91): Manufacturing Enterprises Of The 21st Century - Proceedings Of The International Conference B S Lim,1991-10-02

In the 21st century computer integrated manufacturing CIM systems will not only be the economic development tools but will also be the essential means of achieving a higher level of flexibility cohesiveness and performance CIM systems are beginning to settle into our society and industries with greater emphasis on the integration of economic cultural and social aspects together with design planning factory automation and artificial intelligent systems This volume of proceedings brings together 10 keynote and invited speaker addresses and over 180 papers by practitioners from 28 countries It documents current research and in depth studies on the fundamental aspects of advanced CIM systems and their practical applications The papers fall into 3 main sections CIM Related Issues Industrial AI Applications Aspects and Concurrent Engineering Advanced Design Simulation and Flexible Manufacturing Systems

CIM. Computer Integrated Manufacturing August-Wilhelm Scheer,2012-12-06 Computer Integrated Manufacturing CIM is the computerized handling of integrated operational processes between production planning and control design process planning production and quality assurance The consistent application of information technology along with modern manufacturing techniques and new organizational procedures opens up great potential for rationalization by speeding up processes thereby reducing stocks and improving product structure and delivery times Following a comprehensive justification of the CIM integration principle this book discusses the current state of applications and new demands arising from the integration principle as applied to the individual CIM components The interfaces between business and technical information processing are considered in detail The main emphasis however is on strategies for realization and implementation based on concrete experience The Y CIM information management model developed and tested at the author's institute is presented as a procedural method for implementing CIM and demonstrated using up to date examples In addition to the procedure for developing a CIM strategy concrete sub projects are developed which are directed at specific sector or enterprise structures The survey of further CIM developments including design stage cost estimation use of expert systems and inter company process chains have proved to be effective CIM components since the first edition of this book and are now treated in the main text Six German and five American industrial implementations are presented to illustrate the diverse areas of emphasis in the implementation sequence and to indicate how CIM can be realized with currently available data processing tools

Implementing an Information Strategy in Manufacture Jack Hollingum,2013-11-11 This book grew out of the belief that although the potential of CIM is widely recognised there is little understanding and great nervousness concerning the practical matter of its implementation Are you confident that your company will find the right answers to these questions In which areas can CIM most significantly influence the competitive position of your company What information is it essential to include within a CIM plan How can each phase of your CIM plan

be cost justified and how should it be audited for success How should you set priorities for implementing the various phases of a CIM plan What is the significance of networking to CIM Every company investing in CIM faces these questions but too frequently they are left unanswered Our experience is that the implementation of CIM is primarily a management challenge not a technical one The greatest challenge is how to make the organisational changes needed to obtain the benefits from CIM This book is a valuable guide to anyone planning to invest in CIM

Design and Implementation of Intelligent Manufacturing Systems Mohammed Jamshidi, Hamid R. Parsaei, 1995-05-24 The introduction of artificial intelligence neural networks and fuzzy logic into industry has given a new perspective to manufacturing processes in the U S and abroad To help readers keep pace this book addresses topics of intelligent manufacturing from a variety of theoretical empirical design and implementation perspectives

Computer-Integrated Manufacturing Handbook V.D. Hunt, 2012-12-06 Manufacturing has entered the early stages of a revolutionary period caused by the convergence of three powerful trends The rapid advancement and spread of manufacturing capabilities worldwide has created intense competition on a global scale The emergence of advanced manufacturing technologies is dramatically changing both the products and processes of modern manufacturing Changes in traditional management and labor practices organizational structures and decision making criteria represent new sources of competitiveness and introduce new strategic opportunities These trends are interrelated and their effects are already being felt by the U S manufacturing community Future competitiveness for manufacturers worldwide will depend on their response to these trends Based on the recent performance of U S manufacturers efforts to respond to the challenges posed by new competition technology and managerial opportunities have been slow and inadequate Domestic markets that were once secure have been assailed by a growing number of foreign competitors producing high quality goods at low prices In a number of areas such as employment capacity utilization research and development expenditures and capital investment trends in U S manufacturing over the last decade have been unfavorable or have not kept pace with major foreign competitors such as Japan There is substantial evidence that many U S manufacturers have neglected the manufacturing function have overemphasized product development at the expense of process improvements and have not begun to make the adjustments that will be necessary to be competitive

Featurebasierte Integration von CAD/CAM-Systemen Thomas Ruf, 2013-03-12 Im vorliegenden Buch wird die Konzeption und Realisierung eines rechnerintegrierten Produktionsplanungs und kontrollsystems für den Bereich der hochflexiblen automatisierten Einzel und Kleinserienfertigung mechanischer Bauteile systematisch und schrittweise vorgetragen Zunächst wird anhand einer detaillierten Fallstudie die Integrationsproblematik im Fertigungsbereich aufgezeigt Die zu integrierenden Basiskomponenten rechnergestützter Produktionssysteme insbesondere CAD CAPP PPS CAM Systeme werden anschließend unter dem spezifischen Blickwinkel des Einsatzes in rechnerintegrierten Produktionsumgebungen analysiert Auf dieser Grundlage wird ein allgemeingültiges Integrationskonzept für den CIM Bereich entwickelt das sich auf einem Modell der

Teilfertigung in der Form abstrakter Bearbeitungsschritte abstattet Im Konstruktionsbereich ist dieser Ansatz der Rückführung komplexer Aufgabenstellungen auf wenige generische Grundelemente unter dem Schlagwort Form Features bekannt Der Kerngedanke des Featuremodells wird auf den Planungs Steuerungs und Kontrollbereich der Teileproduktion erweitert Die Realisierbarkeit des Ansatzes wird anhand konkreter Implementierungen von Bausteinen zur dynamischen Ressourcenbelegungsplanung aufgezeigt Die Wechselwirkungen dieses neuartigen Integrationsansatzes mit bestehenden Ansätzen und Teilsystemen in der rechnergestützten Teileproduktion werden abschließend diskutiert
