**Sustainable Postharvest Technologies for Fruits and Vegetables** Sajid Ali, Shabir Ahmad Mir, B.N. Dar, Shaghef Ejaz, 2024-08-30 Fruits and vegetables commonly termed as fresh produce are an important component of the human diet as these provide various beneficial and essential health related compounds Nevertheless fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to inappropriate storage conditions and lack of standard postharvest technologies In addition the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers From this perspective the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis Sustainable Postharvest Technologies for Fruits and Vegetables covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce Therefore this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of

postharvest senescence and deterioration Among the various technologies the use of preharvest treatments controlled atmosphere dynamic control atmosphere modified atmosphere and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry In the same way cold plasma pulsed light ultraviolet light ultrasound technology nanoemulsions nano packaging electrolyzed water high pressure processing ozone gas irradiations edible coatings vacuum packaging and active packaging with slow releasing compounds along with nanotechnology are highly practicable and possesses tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce Key Features Overviews the major factors affecting postharvest physiology and shelf life potential of fresh produce Focuses on major sustainable technologies having the potential to maintain postharvest quality and extend shelf life of fruits and vegetables Describes practical and recent advances of various approaches indispensable for the maintenance of overall eating quality and food safety attainment for fresh produce on a sustainable basis Covers how quality maintenance and shelf life rely on preharvest practices nonthermal treatments storage atmospheres packaging materials active packaging edible packaging coating application techniques nanotechnology and ecofriendly plant extracts and natural antagonists

handling and value addition of key fruits and vegetables project was implemented by FAO Ethiopia over the period 2016-2019. By tackling post harvest losses the project addressed one of the major challenges faced by producers. Farmers have adopted project post harvest management practices, techniques and technologies that have helped to reduce losses and increase food security by boosting income and making more produce available for household consumption. The results will be sustainable because of the economic gains the farmers are seeing and the adaptability of practices and technologies. Studies conducted as part of the project provided evidence of the size and significance of post harvest losses which were previously undocumented. Evidence produced contributed to increase institutional attention on post harvest management.

Postharvest Management and Value Addition Ashwai K. Goel, Rajinder Kumar, Satwinder S. Mann, 2007. The book deals with the latest developments in postharvest operations in agriculture, horticulture and vegetable crops. It includes 15 chapters on different topics contributed by the experts in their fields of specializations. The prospects and opportunities in post harvest management and value addition have been discussed taking into consideration the present global scenario. Drying being a very important post harvest operation has been explained in a separate chapter. Storage structures need special care for maintaining the quality of the produce for merchandising in off season. Thus have also been included in this book for the readers. Potato among vegetables and mango among fruits being significant crops their processing and packaging respectively have been keyed out for the entrepreneurs to highlight the urgent need of value addition in the present times. The separate chapter on value addition of cereals and soybean has been included since horticultural crops are perishable and their chemical and enzymatic changes deteriorate the quality of the produce. Pre cooling techniques have been elaborated. This book with the above details would be a reference tool for the researchers, planners and teachers who are engaged in the field of postharvest technology.
