Question 1

1. Consider the demand for broadband Internet service, given as follows: $Q^D = 224 - 4P$, where Q is the number of subscribers in a given area (in hundreds) and P is the price in dollars per month. This demand relationship is illustrated in the diagram on the right. Assume that the price of broadband service is \$25 per month. Determine the following, paying particular attention to the units in which quantity is denominated:
 - a. The total number of subscribers at that price
 - b. The total amount paid by subscribers for broadband service, area B
 - c. The consumer surplus received by subscribers, area A
 - d. The total value to consumers of the broadband service they received, areas A and B

Solution 1

1. a. If the price of broadband service is \$25 per month, the total number of subscribers at that price is

$$224 - (4 \times 25) = 124$$
 Because the quantity is measured in hundreds, the total number of subscribers is 12,400.
- b. The total amount paid by subscribers for broadband services is

$$\text{Area } B = 12,400 \times \$25 = \$310,000$$
