

③ Answer: 3

④ plug-n-pray yields  $\frac{0}{1} = 0$

⑤  $\frac{x^2}{\sin^2 3x} = \frac{1}{\textcircled{9}} \cdot \frac{\textcircled{3x}}{\sin 3x} \cdot \frac{\textcircled{3x}}{\sin 3x}$  so  $\lim_{x \rightarrow 0} \frac{x^2}{\sin^2 3x} =$   
(multiply by  $\frac{9}{9}$ )

$$\lim_{x \rightarrow 0} \frac{1}{9} \cdot \frac{1}{\lim_{x \rightarrow 0} \left( \frac{\sin 3x}{3x} \right)} \cdot \frac{1}{\lim_{x \rightarrow 0} \left( \frac{\sin 3x}{3x} \right)} = \frac{1}{9} \cdot \frac{1}{1} \cdot \frac{1}{1} = \textcircled{\frac{1}{9}}$$

⑥ Hint:  $1 - \cos^2 2x = \sin^2 2x$  by pythagorean identity, then see problem #5. Also try to do this problem by factoring  $1 - \cos^2 2x$ .

⑦  $\frac{1 - \cos x}{\sin x} = \frac{(1 - \cos x)(1 + \cos x)}{\sin x \cdot (1 + \cos x)} = \frac{1 - \cos^2 x}{\sin x (1 + \cos x)} = \frac{\cancel{\sin x}^{\sin x}}{\cancel{\sin x} (1 + \cos x)} =$

$\frac{\sin x}{1 + \cos x}$  By plug-n-pray:  $\lim_{x \rightarrow 0} \frac{\sin x}{1 + \cos x} = \frac{0}{1 + 1} = \frac{0}{2} = 0$

⑧  $\frac{x^2 + 3x}{\sin x} = \frac{x^2}{\sin x} + \frac{3x}{\sin x} = \frac{x}{1} \cdot \left( \frac{x}{\sin x} \right) + \frac{3}{1} \cdot \left( \frac{x}{\sin x} \right)$

so  $\lim_{x \rightarrow 0} \frac{x^2 + 3x}{\sin x} = \lim_{x \rightarrow 0} x \cdot \lim_{x \rightarrow 0} \left( \frac{x}{\sin x} \right) + 3 \cdot \lim_{x \rightarrow 0} \left( \frac{x}{\sin x} \right)$   
 $0 \cdot 1 + 3 \cdot 1 = \textcircled{3}$

## Answers To Calculus Textbook Problems:

The Contest Problem Book VIII J. Douglas Faires, David Wells, 2022-02-25 For more than 50 years the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools The problems for these contests are constructed in the hope that all high school students interested in mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching These contests are intended for students at all levels from the average student at a typical school who enjoys mathematics to the very best students at the most special school In the year 2000 the Mathematical Association of America initiated the American Mathematics Competitions 10 AMC 10 for students up to grade 10 The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001 2007 J Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period and have assembled this book of problems and solutions There are 350 problems from the first 14 contests included in this collection A Problem Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The problems are cross referenced when they represent several subject areas     **Precalculus** Mehdi Rahmani-Andebili, 2024-01-05 The second edition of this study guide is written and designed for students taking a precalculus course It includes new and expanded exercises with final answers that will help students to review and sharpen their knowledge of the subject and enhance their performance in the classroom The author uses methods typically found in instructor recommended textbooks offering detailed solutions multiple methods for solving problems and clear explanations of concepts This hands on guide will improve students problem solving skills and foster a solid understanding of calculus which will benefit them in all of their calculus based courses     Statistics: Problems And Solution (Second Edition) Eryl E Bassett, J Mike Bremner, Byron Jones, Byron J T Morgan, P M North, Ian T Jolliffe, 2000-06-27 Originally published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics At this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives The solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves The notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems     **Calculus Workbook For Dummies with Online Practice** Mark Ryan, 2018-05-08 The easy way to conquer calculus Calculus is hard no doubt about it and students often need help understanding or retaining the key concepts covered in class Calculus

WHAT THIS BOOK IS FOR Students have generally found accounting a difficult subject to understand and learn Despite the publication of hundreds of textbooks in this field each one intended to provide an improvement over previous textbooks students of accounting continue to remain perplexed as a result of numerous subject areas that must be remembered and correlated when solving problems Various interpretations of accounting terms also contribute to the difficulties of mastering the subject In a study of accounting REA found the following basic reasons underlying the inherent difficulties of accounting No systematic rules of analysis were ever developed to follow in a step by step manner to solve typically encountered problems This results from numerous different conditions and principles involved in a problem that leads to many possible different solution methods To prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps making this task more burdensome than solving the problem directly due to the expectation of much trial and error Current textbooks normally explain a given principle in a few pages written by an accounting professional who has insight into the subject matter not shared by others These explanations are often written in an abstract manner that causes confusion as to the principle's use and application Explanations then are often not sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied The numerous possible variations of principles and their applications are usually not discussed and it is left to the reader to discover this while doing exercises Accordingly the average student is expected to rediscover that which has long been established and practiced but not always published or

adequately explained The examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp of the involved principles The explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations Poorly solved examples such as these can be presented in abbreviated form which leaves out much explanatory material between steps and as a result requires the reader to figure out the missing information This leaves the reader with an impression that the problems and even the subject are hard to learn completely the opposite of what an example is supposed to do Poor examples are often worded in a confusing or obscure way They might not state the nature of the problem or they present a solution which appears to have no direct relation to the problem These problems usually offer an overly general discussion never revealing how or what is to be solved Many examples do not include accompanying diagrams or graphs denying the reader the exposure necessary for drawing good diagrams and graphs Such practice only strengthens understanding by simplifying and organizing accounting processes Students can learn the subject only by doing the exercises themselves and reviewing them in class obtaining experience in applying the principles with their different ramifications In doing the exercises by themselves students find that they are required to devote considerable more time to accounting than to other subjects because they are uncertain with regard to the selection and application of the theorems and principles involved It is also often necessary for students to discover those tricks not revealed in their texts or review books that make it possible to solve problems easily Students must usually resort to methods of trial and error to discover these tricks therefore finding out that they may sometimes spend several hours to solve a single problem When reviewing the exercises in classrooms instructors usually request students to take turns in writing solutions on the boards and explaining them to the class Students often find it difficult to explain in a manner that holds the interest of the class and enables the remaining students to follow the material written on the boards The remaining students in the class are thus too occupied with copying the material off the boards to follow the professor's explanations This book is intended to aid students in accounting overcome the difficulties described by supplying detailed illustrations of the solution methods that are usually not apparent to students Solution methods are illustrated by problems that have been selected from those most often assigned for class work and given on examinations The problems are arranged in order of complexity to enable students to learn and understand a particular topic by reviewing the problems in sequence The problems are illustrated with detailed step by step explanations to save the students large amounts of time that is often needed to fill in the gaps that are usually found between steps of illustrations in textbooks or review outline books The staff of REA considers accounting a subject that is best learned by allowing students to view the methods of analysis and solution techniques This learning approach is similar to that practiced in various scientific laboratories particularly in the medical fields In using this book students may review and study the illustrated problems at their own pace students are not limited to the time such problems receive in the classroom When students want to look up a particular type of problem and solution

they can readily locate it in the book by referring to the index that has been extensively prepared It is also possible to locate a particular type of problem by glancing at just the material within the boxed portions Each problem is numbered and surrounded by a heavy black border for speedy identification
