Core Team,2015-08-19 R is an integrated suite of software facilities for data manipulation calculation and graphical display Among other things it has an effective data handling and storage facility a suite of operators for calculations on arrays in particular matrices a large coherent integrated collection of intermediate tools for data analysis graphical facilities for data analysis and display either directly at the computer or on hard copy and a well developed simple and effective programming language called S which includes conditionals loops user defined recursive functions and input and output facilities Indeed most of the system supplied

functions are themselves written in the S language The term environment is intended to characterize it as a fully planned and coherent system rather than an incremental accretion of very specific and inflexible tools as is frequently the case with other data analysis software R is very much a vehicle for newly developing methods of interactive data analysis It has developed rapidly and has been extended by a large collection of packages However most programs written in R are essentially ephemeral written for a single piece of data analysis
