THE 7 SINS OF HAND SOLDERING TRAINING CERTIFICATION TEST (DVD-49) v.3

This test consists of twenty multiple-choice / true-false questions. All questions are from the video: The Seven Sins of Hand Soldering (DVD-49).

Each multiple-choice question has only one *most* correct answer. Circle the letter corresponding to your selection for each test item. When there is a true-false question, circle true or false. If you wish to change an answer, erase your choice completely.

If you want to change an answer, erase your choice completely.

You should read through the questions and answer those you are sure of first. After your first pass through the test, then go back and answer the questions that you were not sure of. If two answers appear to be correct, pick the answer that seems to be the most correct response.

When you are finished, check to make sure you have answered all of the questions. Turn in the test materials to the instructor.

The passing grade for this test is 70% (14 correct answers or better).

Good luck!

Answers To Hand Soldering Training Certification Exam:

Metrics For Winning Customers in Electronics Vito Mody, 2016-11-23 I was motivated to write this book from encouragement I received from business management professors and successful executives in the electronics industry as well as through my own management experience working with major corporations. The high tech businesses are at a crossroads facing rapidly evolving technologies and fierce competition from everywhere. The success and survival of companies depends on an effective performance metrics framework and a solid continuous improvement program. The metrics program must have executive sponsorship and active management support and involvement. The author talked to many high tech business leaders to get their feedback on the future of the industry. They all indicated that companies with an uncertain future have one thing in common: they all lack effective metrics and continuous improvement programs. While there are many books on general metrics concepts and applications already available, this book is unique. It is dedicated to various businesses and processes prevalent in the electronics industry. The latter is crucial now and in the future to the world economy and is growing very rapidly with thousands of global companies competing for leadership. This book is structured to serve as an excellent reference for developing the strategy for and the execution of a practical, usable and easy to understand metrics program for any business in the electronics industry.
