An Introduction To Music Technology:

An Introduction to Music Technology Dan Hosken, 2014-08-01 An Introduction to Music Technology Second Edition provides a clear overview of the essential elements of music technology for today's musician. This book focuses on the topics that underlie the hardware and software in use today: Sound, Audio, MIDI, Computer Notation, and Computer Assisted Instruction. Appendices cover necessary computer hardware and software concepts. Written for both music technology majors and non-majors, this textbook introduces fundamental principles and practices so students can learn to work with a wide range of software programs, adapt to new music technologies, and apply music technology in their performance, composition, teaching, and analysis. Features: Thorough explanations of key topics in music technology; Content applicable to all software and hardware, not linked to just one piece of software or gear; In-depth discussion of digital audio topics such as sampling rates, resolutions, and file formats; Explanations of standard audio plug-ins including dynamics processors, EQs, and delay-based effects; Coverage of synthesis and sampling in software instruments; Pedagogical features including Further Reading sections that allow the student to delve deeper into topics of interest; Suggested Activities that can be carried out with a variety of different programs; Key Terms at the end of each chapter; What Do I Need? Chapters covering the types of hardware and software needed in order to put together Audio and MIDI systems; A companion website with links to audio examples that demonstrate various concepts; step-by-step tutorials; relevant hardware, software, and additional audio and video resources. The new edition has been fully updated to cover new technologies that have emerged since the first edition, including iOS and mobile platforms, online notation software, alternate controllers, and Open Sound Control (OSC).

performers and composers **Children's Creative Music-Making with Reflexive Interactive Technology** Victoria Rowe, Angeliki Triantafyllaki, Francois Pachet, 2016-10-14

Children's Creative Music Making with Reflexive Interactive Technology discusses pioneering experiments conducted with young children using a new generation of music software for improvising and composing. Using artificial intelligence techniques, this software captures the children's musical style and interactively reflects it in its responses. The book describes the potential of these applications to enhance children's agency and musical identity by reflecting players' musical inputs, storing and creating variations on them. Set in the broader context of current music education research, it addresses the benefits and challenges of incorporating music technologies in primary and pre-school education. It is comprised of six main chapters which cover the creation of children's own music and their musical selves, critical thinking skills and learner agency, musical language development and emotional intent during creative music making. The authors provide a range of straight forward techniques and strategies which challenge conceptions of difficult to use music technologies in formal music education. These are supported by an informative collection of practitioner vignettes written by teachers who have used the software in their classrooms. Not only are the teachers' voices heard here but also those of children as they discover some of the creative possibilities of music making. The book also provides free access to a companion website with teacher forums and a large bank of activities to explore. A toolkit serves as a database of the teaching activities in which MIROR applications have been used and provides a set of useful ideas regarding its future use in a variety of settings. This book demonstrates that music applications based on artificial intelligence techniques can make an important contribution to music education within primary and pre-school education. It will be of key interest to academics, researchers and postgraduate students in the fields of music education, music technology, early years and primary education, teaching and learning and teacher educators. It will also serve as an important point of reference for Early Years and Primary practitioners.
