Small Business Bibliography, 1963 *Coming Home to Math* Irving P. Herman, 2020 We use numbers here, there and everywhere. Numbers are some of my favorite things. Linking numbers, operations on numbers. Words and numbers being careful. Writing really big and really small numbers and those in between. Touching all bases at times with logs. Numbers need to be exact but it ain't necessarily so. The different types of numbers have not evolved but our understanding of them has. Really really big and really really small numbers. The whole truth of whole numbers. The math of the digital world, modular arithmetic or using number leftovers. The math of what will be, progressions of growth and decay. Untangling the worlds of probability and statistics. The math of what might be, probability, what are the odds. The math of what was, statistics, the good, the bad and the evil. The math of big data. The math of optimization, ranking, voting and allocation. The math of gaming. The math of risk.

Readings in Public Choice and Constitutional Political Economy Charles Rowley, Friedrich Schneider, 2008-08-09 Public choice is the study of behavior at the intersection of economics and political science. Since the pioneering work of Duncan Black in the 1940s, public choice has developed a rich literature drawing from such related perspectives as history, philosophy, law and sociology to analyze political decision making by citizen voters, elected officials, bureaucratic administrators, lobbyists and other rational actors in social and economic context with an emphasis on identifying differences between individual goals and collective outcomes. Constitutional political economy provides important insights into the relationship between effective constitutions and the behavior of ordinary political markets. In *Readings in Public Choice and Constitutional Political Economy*, Charles Rowley and Friedrich Schneider have assembled an international array of leading authors to present a comprehensive and accessible overview of the field and its applications. Covering a wide array of topics including regulation and antitrust, taxation, trade liberalization, political corruption, interest group behavior, dictatorship and environmental issues and featuring biographies of the founding fathers of the field, this volume will be essential reading for scholars and students, policymakers, economists.
