How and Why Does Spatial-Hearing Ability Differ among Listeners? What Is the Role of Learning and Multisensory Interactions? Guillaume Andéol,Brian D. Simpson,Ewan A. Macpherson,2016-08-29 Spatial hearing ability has been found to vary widely across listeners A survey of the existing auditory space perception literature suggests that three main types of factors may account for this variability physical factors e g acoustical characteristics related to sound localization cues perceptual factors e g sensory cognitive processing perceptual learning multisensory interactions and methodological factors e g differences in stimulus presentation methods across studies However the extent to which these and perhaps other still unidentified factors actually contribute to the observed variability in spatial hearing across individuals with normal hearing or within special populations e g hearing impaired listeners remains largely unknown Likewise the role of perceptual learning and multisensory interactions in the emergence of a multimodal but unified representation of auditory space is still an active topic of research A better characterization and understanding of the determinants of inter individual variability in spatial hearing and of its relationship with perceptual learning and multisensory interactions would have numerous benefits In particular it would enhance the design of rehabilitative devices and of human machine interfaces involving auditory or multimodal space perception such as virtual auditory multimodal displays in aeronautics or navigational aids for the visually impaired For this Research Topic we have considered manuscripts that present new methods or review existing methods for the study of inter individual differences present new data or review existing data concerning acoustical features relevant for explaining inter individual differences in sound localization performance present new or review existing psychophysical or neurophysiological findings concerning spatial hearing and or auditory perceptual learning and or multisensory interactions in humans normal or impaired young or older listeners or other species discuss the influence of inter individual differences on the design and use of assistive listening devices rehabilitation or human machine interfaces involving spatial hearing or multimodal perception of space ergonomics

The Cognitive Era in Sports Performance: Mental Fatigue, Cognitive Training, and Psychological Ergogenic Substances Dalton de Lima-Junior,Samuele Maria Marcora,Fábio Yuzo Nakamura, Leonardo De Sousa Fortes,Thiago Ribeiro Lopes,2025-09-08 In the past century numerous articles have explored enhancing sports performance primarily focusing on aspects such as physical training fatigue and physiological parameters Nevertheless in recent decades there has been a notable recognition of the pivotal role played by cognitive parameters in achieving superior results Over the last decade the volume of articles specifically addressing mental fatigue has surged into the thousands Consequently various strategies aimed at mitigating its adverse effects have emerged in the literature These strategies encompass cognitive training and the use of substances such as caffeine Furthermore it has been observed that these interventions may not only alleviate the negative impact of mental

fatigue but also enhance performance concerning baseline values Despite these advancements a comprehensive understanding of these phenomena remains elusive and there is a pressing need for the development of a substantial body of evidence to unravel the intricacies involved
