The progress in modern tiny multifunctional wireless devices has dramatically increased the demand for microstrip antennas in recent years. Furthermore, in the last few years, such microstrip antennas found numerous applications in both the military and the commercial sectors. Therefore, microstrip patch antenna has become a major focus to the researchers in the field of antenna engineering. In this book, some recent advances in microstrip antennas are presented. This book contains mainly three sections. In the first section, some new approaches to modern analytical techniques rather than the conventional cavity model, transmission line model, or spectral domain analysis have been discussed. In the second section of the book, a light has been showered on some new techniques for bandwidth enhancement of microstrip radiators. In the last section of the book, the recent trends in microstrip antenna research have been showcased. Some newfangled application oriented approach to this field is vividly discussed. The book's main objective is to facilitate the microstrip antenna researchers for exploring the subject in more vibrant manner and also to revolutionize wireless communications. A sufficient number of topics have been covered, some for the first time in a research

Formal Ontologies Meet Industry R. Ferrario, A. Oltramari, 2009-08-21 This book is a collection of papers addressing the multi shaped character of knowledge new studies and applications in the field of ontology and semantic technology The semantic dimension of information plays an increasingly central role in a networked knowledge centred economy and the

need to encode information into computer systems has led to a bias towards Knowledge Engineering KE solutions as opposed to Knowledge Management KM Although the intersection between KE and KM has led to a general improvement of information systems the overlap between these two fields has tended to eclipse interest in genuine knowledge processes For this reason the fourth FOMI workshop was held to coincide with the 10th European Conference of Knowledge Management ECKM with the explicit aim of bringing together KR and KM sub communities providing a platform for discussion of these topics Subjects covered include the evolution of ontologies in accordance with the evolution of the domain they are designed for the study of the notions of functional composition and decomposition modular ontologies for architecture ontology infrastructure for electromagnetics ontology of beliefs enterprise modelling the application of ontology based methodologies and techniques to knowledge management issues ontologies for standards and domain ontologies for biomedicine The double focus on methodological and applicative issues represents the main feature of these FOMI 2009 articles This comprehensive perspective will advance progress towards new frontiers in information systems and knowledge management where research and development in formal ontology will play a leading role
