ABSTRACT

Muntingia calabura, the sole species in the genus *Muntingia*, is a flowering plant, that belongs to Elaeocarpaceae family. This is a fast growing fruit tree. It is a pioneer species that thrives in poor soil, able to tolerate acidic and alkaline conditions and drought. The fruits are commonly called Jamaican cherry and are red in colour. The flowers are used as an antiseptic and to treat abdominal cramps and spasms. It is also taken to relieve headaches and colds. *Muntingia calabura* fruits possess antioxidant property. However, their anti-inflammatory activity has not been investigated so far. The aim of this study, therefore, was to evaluate the anti-inflammatory activity from the fruits of *M. calabura*. The methanolic fruit extracts (100, 200 and 300 mg/kg i.p.) reduced the Carrageenan-induced edema of the hind paw of adult male Wistar Albino rats in 3 hours. The activity was compared with that of the standard drug indomethacin. Acute toxicity was investigated and the results indicated no abnormalities in the behaviour and lethality by the extract up to 1000 mg/kg. These results indicate the fruit extract of *M. calabura* possess potent anti-inflammatory activity. Therefore, these pharmacological results clearly support traditional folkloric application of *M. calabura* fruits in the control and/or pain, inflammatory illness as well as an antioxidant agent.

Key words: *Muntingia calabura* fruits; elaeocarpaceae, anti-inflammatory, antioxidant activity

INTRODUCTION

Plants are potent biochemical factories and have been components of phytomedicine. Since time immemorial man is able to obtain from them a wondrous assortment of industrial chemicals. Plant-based natural constituents can be derived from any part of the plant like bark, leaves, flowers, roots, fruits, seeds, etc., that is, any part of the plant may contain active components.^[1]

The protective effect of fruits and vegetables has generally been attributed to their antioxidant constituents, including vitamin C (ascorbic acid), Vitamin E (tocopherol), carotenoids, glutathione, flavonoids and phenolic acids, as well as other unidentified compounds.^[2]

Various herbal medicines derived from plant extracts are being used in the treatment of a wide variety of clinical diseases, though relatively little knowledge about their

mechanism or action is known.^[3] Many herbal preparations are being prescribed widely for the treatment of inflammatory conditions.^[4] There is a need for research and developmental work in herbal medicine because apart from the social and economic benefits, it has become a persistent aspect of present day health care in developing countries.

Plant secondary metabolites have provided an important source of drugs since ancient times and now around half of the practical drugs used are derived from natural sources.^[5]

Some research has shown that flavonoid compounds are present in various plants; exert beneficial effects on human health such as cardiovascular protection, anti-cancer activity, antinociceptive activity and anti inflammatory effects.^[6,7,8]

It is known that there are links between the inflammatory and nociceptive, oxidative and cancer processes. The ability to inhibit any of the processes will definitely lead to the inhibition of the others.^[9]

Water soluble extract from leaves of *AL. calabura* produced potent antinociceptive and anti-inflammatory activities. The preliminary phytochemical analysis performed in *M. calabura* leaves showed the presence of flavonoids, chalcones, terpenoids and phenolic compounds. The constituents responsible for the analgesic and anti inflammatory effects of *AL. calabura* have not yet been elucidated.^[10]

Medicinal Plants Parimelazhagan Thangaraj,2018-03-29 This book highlights the importance of traditional medicines focuses on the standardization of herbal medicine and evaluates opportunities for advancing drug research It addresses issues in utilization of medicinal plants and shares the importance of

herbs in nutraceuticals. It provides most competitive techniques being used in research. Nutraceuticals from Agri-Food By-Products Umile Gianfranco Spizzirri, 2023-09-11. NUTRACEUTICALS FROM AGRI FOOD BY PRODUCTS. This book represents a comprehensive and unique overview covering different aspects: raw materials, technological innovations, and potential applications concerning waste and by-products of the food industry. Wastes and by-products of the agri-food chain represent a rich source of active molecules that can be usefully employed in the food and pharmaceutical industries. Eco-friendly extraction procedures able to isolate the different components of the agri-food by-products represent an attractive challenge to increase the waste's value and at the same time solve the issues usually related to their disposal. Each of the 12 chapters in *Nutraceuticals from Agri-Food By-Products* deeply analyses a specific agri-food chain, highlighting the main components recovered in the processing of food, seafood, and dairy wastes and by-products. Specifically, a green approach to the extraction of active molecules is described, as well as the industrial application of agri-food wastes and by-products and their chemical, physical, and biological properties. Such properties are suitable for use in the food, cosmetic, and pharmaceutical fields. This circular approach could be usefully employed in the industry to develop and commercialize new nutraceuticals and/or functional food that guarantee a considerable increase in the economic worth of the wastes while producing beneficial effects on human health. Audience: Food technologists and biotechnologists in research and industry as well as researchers in pharmaceutical sciences.
