Atherosclerosis: Diet and Drugs Arnold Eckardstein, 2005-11-02 Cardiovascular diseases continue to be the leading cause of death in the majority of industrialized countries The most frequent underlying pathology namely atherosclerosis and its clinical sequelae namely coronary heart disease cerebrovascular disease and peripheral artery disease remain common although for a long time we have been made aware of avoidable or modifiable etiological factors such as smoking fat rich diet or lack of exercise and although these adverse lifestyle factors have been extensively addressed by population wide primary prevention programs Cardiovascular morbidity and mortality also remain high despite successful anti-hypertensive and lipid lowering drug therapies which help to reduce cardiovascular morbidity and mortality by about 30% in both secondary and tertiary prevention settings This can partly be explained by the increasing life expectancy and growing proportion of elderly people especially in Europe and North America In addition the World Health Organization makes the alarming prediction that probably in response to the spreading of western dietary behavior and lack of exercise resulting in an increasing prevalence of diabetes dyslipidemia and hypertension cardiovascular diseases rather than infectious diseases will become the most frequent cause of death worldwide This volume of the Handbook of Experimental Pharmacology entitled

Atherosclerosis is divided into four parts and intends to give an overview on the pathogenesis of atherosclerosis established treatment and prevention regimen and of perspectives for the development of new treatment modalities

McFarlane, 2019-12-18 Dyslipidemia is a major risk factor for cardiovascular disease which is the leading cause of morbidity and mortality around the globe particularly among aging populations Lipoprotein disorders frequently encountered by clinicians require early recognition and treatment In this book we assembled a group of world renowned scholars in their

field to address major areas in lipoprotein disorders that are imminently relevant to clinicians and other healthcare providers. Areas discussed include an overview of lipid metabolism a complex topic presented in a simplified and rational way. We also highlight recent developments in the field including dyslipidemias characterized by nontraditional lipid biomarkers. Furthermore we discuss the pathogenesis of atherosclerosis and the role of dyslipidemia. Other chapters include the assessment of primary and secondary causes of dyslipidemia. Targets for treatment as well as the role of major therapeutic agents including statins and PCSK9 inhibitors are also discussed in light of the most recent guidelines by major international organizations. This is in addition to an overview of lifestyle and dietary modification as well as alternative options for dyslipidemia management. Furthermore dyslipidemia in special populations is emphasized including various ethnic groups as well as those with HIV disease chronic kidney disease among others. The role of adiposity including brown fat together with highlights on lipidomics and dyslipidemias characterized by nontraditional lipid biomarkers is also highlighted. We believe that this volume will serve as a valuable resource not only for clinicians and other healthcare providers but for students and research scholars as well.
