Brehme, Robert Nathan Fisher, Silviu O. Petrovan, Viorel Dan Popescu, Thomas Edward S. Langton, Kimberly M. Andrews, 2024-05-21 Roads may threaten the persistence of wildlife populations by acting as barriers to movement and or sources of increased mortality across the landscape Amphibians and reptiles have been identified as being particularly susceptible to negative road impacts Many species migrate annually among habitats to support basic life history requirements such as breeding development foraging and overwintering For these species individuals may need to successfully cross roads multiple times each year for the population to persist Many are slow moving and freeze in the presence of danger making it almost impossible for them to avoid oncoming vehicles Although there are a plethora of road mortality location and count data the effects of road mortality on the long term viability of amphibian and reptile populations and metapopulations are mostly unknown due to a lack of

information on their abundance vital rates behavior and spatial and temporal dynamics A Checklist of the Amphibians and Reptiles of Georgia Wilfred T. Szaro, Kieth E. Severson, David R. Patton, 1988 Historically the management of public lands from a multiple use perspective has led to a system that emphasizes those habitat components or faunal elements that primarily resulted in some sort of definable economic value While this often benefitted other species that were not even considered in the original prescriptions it also negatively impacted others We no longer can afford to take this simplistic view of ecosystem management We need to use a more holistic approach where ecological landscapes are considered as units and land management practices incorporate all elements into an integrated policy This includes examining the impacts of proposed land uses on amphibian reptile and small mammal populations **Frogs of the United States and Canada** C.
