Formal Ontology in Information Systems Nicola Guarino, 1998

Research on ontology is becoming increasingly widespread in the computer science community While this term has been rather confined to the philosophical sphere in the past it is now gaining a specific role in areas such as Artificial Intelligence Computational Linguistics and Databases Its importance has been recognized in fields as diverse as knowledge engineering knowledge representation qualitative modeling language engineering database design information integration object oriented analysis information retrieval and extraction knowledge management and organization agent based systems design Current applications areas are disparate including enterprise integration natural language translation medicine mechanical

engineering electronic commerce geographic information systems legal information systems and biological information systems Various workshops addressing the engineering aspects of ontology have been held in the recent years However ontology by its very nature ought to be a unifying discipline Insights in this field have potential impact on the whole area of information systems taking this term in its broadest sense as testified by the interest recently shown by international standards organizations In order to provide a solid general foundation for this work it is therefore important to focus on the common scientific principles and open problems arising from current tools methodologies and applications of ontology

Formal Ontology in Information Systems Antony Galton, Riichiro Mizoguchi, 2010 Ontology began life in ancient times as a fundamental part of philosophical enquiry concerned with the analysis and categorisation of what exists In recent years the subject has taken a practical turn with the advent of complex computerised information systems which are reliant on robust and coherent representations of their subject matter The systematisation and elaboration of such representations and their associated reasoning techniques constitute the modern discipline of formal ontology which is now being applied to such diverse domains as artificial intelligence computational linguistics bioinformatics GIS knowledge engineering information retrieval and the Semantic Web Researchers in all these areas are becoming increasingly aware of the need for serious engagement with ontology understood as a general theory of the types of entities and relations making up their respective domains of enquiry to provide a solid foundation for their work The conference series Formal Ontology in Information Systems FOIS provides a meeting point for researchers from these and other disciplines with an interest in formal ontology where both theoretical issues and concrete applications can be explored in a spirit of genuine interdisciplinarity This volume contains the proceedings of the sixth FOIS conference held in Toronto Canada during 11-14 May 2010 including invited talks by Francis Jeffry Pelletier John Bateman and Alan Rector and the 28 peer reviewed submissions selected for presentation at the conference ranging from foundational issues to more application oriented topics IOS Press is an international science technical and medical publisher of high quality books for academics scientists and professionals in all fields Some of the

Habitable Future Tiziana Ferrante, Marco Sacco, 2025-09-01 This open access book presents a multidisciplinary approach to the design of living spaces from an age friendly perspective in line with the Ambient Assisted Living AAL paradigm which promotes the integration of assistive devices and technologies to create safe comfortable environments that meet the needs of older adults and their caregivers It outlines new operational strategies incorporating an analysis of technological development trends focused on the well being and health of older adults identifying their needs and expectations through participatory processes and establishing design requirements to foster the acceptance of interfaces and emerging devices In light of the exponential increase in smart applications within living environments the book emphasizes the necessity to introduce cutting edge solutions for data transmission and processing as well as the development of semantically driven tools to support designers in selecting and integrating assistive technologies through virtual environment simulations The book also illustrates the methodological processes adopted in defining guidelines for the design of spaces dedicated to older adults with attention to architectural and functional aspects in various domains perceptual and sensory factors for the design of waiting areas in Community Houses technological and environmental requirements for the integration of devices in home adaptation projects for Home Care and locational and typological criteria for the development of new Social Day Care Centers These contributions are based on the experiences shared during the conference organized by the WP1 Human Centred Design and Evaluation Certifications Sustainability within the Built Environment of Spoke9 within the framework of the Age It NRRP program

The Threefold Logic of Advanced Architecture Manuel Gausa, Jordi Vivaldi, 2021-04-15 During the last 30 years Advanced Architecture has consolidated an interactive and informational logic that differs from that of Modernity and Postmodernity This logic is threefold it is modulated through three coexisting protocols modes of action whose peaks of intensity occur in three different decades Conformative Protocols 1990 2000 Distributive Protocols 2000 2010 and Expansive Protocols 2010 2020 This work proposes a threefold cultural narrative whose interactive and informational logic differs from that of modernity and postmodernity It positions three different ethos by critically approaching the architectural side of a cultural mutation that has been affecting the Western experimental areas of knowledge and practice since the end of the last century A transformative process constituted by a constellation of transdisciplinary manifestations accelerations turns shortcuts and clusterizations that by no means can be read under one single epistemological umbrella In this sense rather than approaching the practice of architecture focusing on its disciplinary inner specificity this book approaches the research of experimental architecture focusing on its extra disciplinary entanglements It argues that a vast multiplicity of fields of knowledge participates in a cultural endeavour modulated through three protocols forms of action that singularize three decades Conformative Protocols 1990 2000 Distributive Protocols 2000 2010 and Expansive Protocols 2010 2020 These three periods shouldn t be read as three hermetic and concatenated monades but as three different modulations of the same

narrative that is as three overlapping and coexisting systems whose peaks of intensity occur in three different decades. However the main purpose of this book is not limited to unveiling the ethos of these three conjugations. It also aims at using this framework as a time field a narrative map that moves from the classificatory to the cartographical in order to vectorize the last 30 years of experimental architecture. In this sense this book argues that this threefold set of protocols represents the progressive attempt to constitute critical interiorities looking for and produced through interactions that are increasingly more intimate and whose agents are increasingly more diverse. A tendency oriented towards the consolidation of an intimacy between strangers that highly resonates with the cultural and technological landscape in which experimental architecture operates.

Theories of Geographic Concepts Marinos Kavouras, Margarita Kokla, 2007-12-20. Most widely available approaches to semantic integration provide ad hoc non systematic subjective manual mappings that lead to procrustean amalgamations to fit the target standard an outcome that pleases no one. Written by experts in the field. Theories of Geographic Concepts. Ontological Approaches to Semantic Integration emphasizes the *Representing Space in Cognition* Thora Tenbrink, Jan M. Wiener, Christophe Claramunt, 2013-10-31. This book considers how people talk about their environment find their way in new surroundings and plan routes. Part I explores the empirical insights gained from research in the cognitive underpinnings of spatial representation in language. Part II proposes solutions for capturing such insights formally and in Part III authors discuss how theory is put into practice through spatial assistance systems. These three perspectives stem from research disciplines which deal with the spatial domain in different ways and which often remain separate. In this book they are combined so as to highlight both the state of the art in the field and the benefit of building bridges between methodologies and disciplines. Finding our way and planning routes is relevant to us all. This book ultimately helps improve our everyday lives.
