Spectroscopic Methods in Food Analysis Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e g chromatographic methods are time demanding expensive and involve a considerable amount of manual labor Therefore there has been an increasing interest in simpler faster and reliable analytical methods for assessing food quality attributes

Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers As such this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation provide rapid and on line analysis and have the potential to run multiple tests on a single sample i e non destructive This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer the consumer the surveillance and the legislative bodies that ultimately provide healthy and safe products

Handbook of Olive Oil: Analysis and Properties Ramon Aparicio, John

Harwood,2013-11-09 Olive oil is the major edible vegetable oil of the Mediterranean countries and Portugal It is also perhaps the oldest reported crop in history The olive tree is capable of existing in a harsh climate on poor soils and trees 500 years old still bear fruit The oil itself is much prized for its flavor and aroma The highest quality oils are obtained without solvent extraction from fresh and healthy fruits Although the subtle sensory characteristics of olive oil account for its popularity despite a high market price increasing interest has been given to its nutritional properties which are believed to play a large role in the so called Mediterranean Diet In this book we provide a wealth of detail about the analysis and properties of olives and their oil After an introduction to olive oil and to technological aspects we include a section on biochemistry because of course the unique properties of the oil are based on the biochemistry of the olive fruit This applies not only to the main constituents the various triacylglycerols but also to minor sensory components that are derived largely from the lipoxygenase catabolic pathway Following are chapters that deal with the analysis of olive oil from the standpoint of general methodology and later chapters describe detailed techniques The sophisticated analytical methods have to be evaluated by the use of mathematical procedures for characterization
