*Advanced Data Analysis in Neuroscience* Daniel Durstewitz,2017-09-15 This book is intended for use in advanced graduate courses in statistics machine learning as well as for all experimental neuroscientists seeking to understand statistical methods at a deeper level and theoretical neuroscientists with a limited background in statistics It reviews almost all areas of applied statistics from basic statistical estimation and test theory linear and nonlinear approaches for regression and classification to model selection and methods for dimensionality reduction density estimation and unsupervised clustering Its focus however is linear and nonlinear time series analysis from a dynamical systems perspective based on which it aims to convey an understanding also of the dynamical mechanisms that could have generated observed time series Further it integrates computational modeling of behavioral and neural dynamics with statistical estimation and hypothesis testing This way computational models in neuroscience are not only explanatory frameworks but become powerful quantitative data analytical tools in themselves that enable researchers to look beyond the data surface and unravel underlying mechanisms Interactive examples of most methods are provided through a package of MatLab routines encouraging a playful approach to the subject and providing readers with a better feel for the practical aspects of the methods covered Computational neuroscience is essential for integrating and providing a basis for understanding the

myriads of remarkable laboratory data on nervous system functions Daniel Durstewitz has excellently covered the breadth of computational neuroscience from statistical interpretations of data to biophysically based modeling of the neurobiological sources of those data His presentation is clear pedagogically sound and readily useable by experts and beginners alike It is a pleasure to recommend this very well crafted discussion to experimental neuroscientists as well as mathematically well versed Physicists The book acts as a window to the issues to the questions and to the tools for finding the answers to interesting inquiries about brains and how they function Henry D I Abarbanel Physics and Scripps Institution of Oceanography University of California San Diego This book delivers a clear and thorough introduction to sophisticated analysis approaches useful in computational neuroscience The models described and the examples provided will help readers develop critical intuitions into what the methods reveal about data The overall approach of the book reflects the extensive experience Prof Durstewitz has developed as a leading practitioner of computational neuroscience Bruno B Averbeck [An Introductory Handbook of Bayesian Thinking](#) Stephen C. Loftus,2024-04-17 An Introductory Handbook of Bayesian Thinking brings Bayesian thinking and methods to a wide audience beyond the mathematical sciences Appropriate for students with some background in calculus and introductory statistics particularly for nonstatisticians with a sufficient mathematical background the text provides a gentle introduction to Bayesian ideas with a wide array of supporting examples from a variety of fields Utilizes real datasets to illustrate Bayesian models and their results Guides readers on coding Bayesian models using the statistical software R including a helpful introduction and supporting online resource Appropriate for an undergraduate statistics course as well as for non statisticians with sufficient mathematical background integral and differential Calculus and an introductory Statistics course Covers any more advanced topics which readers may not be familiar with such as the basic idea of vectors and matrices **Telling Stories with Data** Rohan Alexander,2023-07-27 The book equips students with the end to end skills needed to do data science That means gathering cleaning preparing and sharing data then using statistical models to analyse data writing about the results of those models drawing conclusions from them and finally using the cloud to put a model into production all done in a reproducible way At the moment there are a lot of books that teach data science but most of them assume that you already have the data This book fills that gap by detailing how to go about gathering datasets cleaning and preparing them before analysing them There are also a lot of books that teach statistical modelling but few of them teach how to communicate the results of the models and how they help us learn about the world Very few data science textbooks cover ethics and most of those that do have a token ethics chapter Finally reproducibility is not often emphasised in data science books This book is based around a straight forward workflow conducted in an ethical and reproducible way gather data prepare data analyse data and communicate those findings This book will achieve the goals by working through extensive case studies in terms of gathering and preparing data and integrating ethics throughout It is specifically designed around teaching how to write about the data and models so aspects such as writing are explicitly

covered And finally the use of GitHub and the open source statistical language R are built in throughout the book Key Features Extensive code examples Ethics integrated throughout Reproducibility integrated throughout Focus on data gathering messy data and cleaning data Extensive formative assessment throughout
