The Spatial Scale of Crime John R. Hipp, 2022-12-09 Combining insights from two distinct research traditions the communities and crime tradition that focuses on why some neighborhoods have more crime than others and the burgeoning crime and place literature that focuses on crime in micro geographic units this book explores the spatial scale of crime Criminologist John Hipp articulates a new theoretical perspective that provides an individual and household level theory to underpin existing ecological models of neighborhoods and crime A focus is maintained on the agents of change within neighborhoods and communities and how households nested in neighborhoods might come to perceive problems in the neighborhood and then have a choice of exit voice loyalty or neglect EVLN A characteristic of many crime incidents is that they happen at a particular spatial location and a point in time These two simple insights suggest the need for both a spatial and a longitudinal perspective in studying crime events The spatial question focuses on why crime seems to occur more frequently in some locations than others and the consequences of this for certain areas of cities or neighborhoods The longitudinal component focuses on how crime impacts and is impacted by characteristics of the environment This book looks at where offenders targets and guardians might live and where they might spatially travel throughout the environment exploring how vibrant neighborhoods are generated how neighborhoods change and what determines why some neighborhoods decline over time while others avoid this fate Hipp s theoretical model provides a cohesive response to the general question of the spatial scale of crime and articulates necessary future directions for the field This book is essential for students and scholars interested in spatial temporal criminology *Principles of Marketing' 2008 Ed. ,2008* The Oxford Handbook of Environmental Criminology Gerben J.N. Bruinsma, Shane D. Johnson, 2018-02-08 The study of how the environment local geography and physical locations influence crime has a long history that stretches across many research traditions These include the neighborhood effects approach developed in the 1920s the criminology of place and a newer approach that attends to the perception of crime in communities Aided by new technologies and improved data reporting in recent decades research in environmental criminology has developed rapidly within each of these approaches Yet research in the subfield remains fragmented and competing theories are rarely examined together The Oxford Handbook of Environmental Criminology takes a unique approach and synthesizes the contributions of existing methods to better integrate the subfield as a whole Gerben J N Bruinsma and Shane D Johnson have assembled a cast of top scholars to provide an in depth source for understanding how and why physical setting can influence the emergence of crime affect the environment and impact individual or group behavior The contributors address how changes in the environment global connectivity and technology provide more criminal opportunities and new ways of committing old crimes They also explore how crimes committed in countries with distinct cultural practices like China and West Africa might lead to different spatial patterns of crime This is a state of the art compendium on environmental criminology that reflects the diverse research and
