Therapeutic RNA Nanotechnology Kirill A. Afonin, Morgan Chandler, 2021-07-21 This collection of research articles and reviews covers the latest work in the design delivery dynamic abilities and immune stimulation of RNA nanoparticles which have driven the utilization of their immunomodulatory properties The unknown immune properties of nucleic acid nanoparticles have been a major hurdle in their adaptation until the works herein began assessing their structure activity relationships This collection chronologically follows the path of investigating the recognition of design components to implementing them into nucleic acid nanostructures RNA nanotechnology is an emerging platform for therapeutics with increasing clinical relevance as this approach becomes more widely used and approved for the treatment of various diseases The latest research aims to take advantage of RNA s modular nature for the design of nanostructures which can interact with their environments to communicate programmed messages with intracellular pathways In doing so nanoparticles can be used to elicit or elude responses by the immune system as desired in conjunction with their therapeutic applications

Applications of Time-of-Flight and Orbitrap

Mass Spectrometry in Environmental, Food, Doping, and Forensic Analysis, 2016-06-02 Applications of Time of Flight and Orbitrap Mass Spectrometry in Environmental Food Doping and Forensic Analysis deals with the use of high resolution mass spectrometry MS in the analysis of small organic molecules Over the past few years time of flight ToF and Orbitrap MS have both experienced tremendous growth in a great number of analytical sectors and are now well established in many laboratories where high requirements are placed on analytical performance This book gives a head to head comparison of these two technologies that compete directly with each other As users with hands on experience in both techniques the authors provide a balanced description of the strengths and weaknesses of both techniques In the vast majority of cases ToF MS and Orbitrap MS have been used for qualitative purposes mainly identification of discrete molecular entities such as drug metabolites or transformation products of environmental contaminants This paradigm is now changing as quantitative capabilities are increasingly being explored as are non target approaches for unbiased broad scope screening In view of the continuous innovation of high resolution MS instrument manufacturers in designing and developing more powerful machines technological advances in both hardware and software are considerable with many novel applications This book summarizes and analyzes these trends The compilation of selected examples from diverse analytical fields will allow the readers to discover not only the potential of high resolution MS in their sector but also shows advances in other fields that rely on hi res MS Provides comprehensive coverage of applications of time of flight and orbitrap mass spectrometry in environmental food doping and forensic analysis Explores a variety of specialized techniques giving a balanced description of the strengths and weaknesses of each Presents a general overview of imaging techniques within analysis Anti-Cancer N-Heterocyclic Carbene Complexes of Gold(III), Gold(I) and Platinum(II) Taotao Zou, 2016-02-19 This thesis focuses on the development of gold and non classical platinum based anti cancer agents that display distinctively different anti cancer mechanisms compared to the commonly used cisplatin These metal complexes contain N heterocyclic carbene NHC ligands which are able to form strong M C NHC bonds conferring high stability and favorable lipophilicity reactivity and binding specificity of metal complexes on biomolecules The author demonstrates significant advances made in anti cancer gold III gold I and platinum II complexes Detailed chemical synthesis in vitro and or in vivo anti cancer activities are clearly presented including i a class of Au III complexes containing a highly fluorescent N N N ligand and NHC ligand that simultaneously act as fluorescent thiol switch on probes and anti cancer agents ii a dinuclear gold I complex with a mixed diphosphine and bis NHC ligand displaying favorable stability and showing significant inhibition of tumor growth in two independent mice models with no observable side effects and iii a panel of stable luminescent cyclometalated platinum II complexes exhibiting high specificity to localize to the endoplasmic reticulum ER domain inducing ER stress and cell apoptosis These works highlight the clinical potential that gold and platinum complexes offer for cancer treatment Ultra Performance Liquid Chromatography Mass Spectrometry Mu Naushad, Mohammad Rizwan Khan, 2014-03-18 This book presents a unique collection of up to date UPLC

MS MS ultra performance liquid chromatography tandem mass spectrometric methods for the separation and quantitative determination of pesticides capsaicinoids heterocyclic amines aflatoxin perfluorochemicals acrylamide procyanidins and alkaloids lactose content phenolic compounds vitamins and aroma and flavor compounds in a wide variety of foods and food products With contributions by experts in interdisciplinary fields this reference offers practical information for readers in research and development production and routing analysis of foods and food products *Using Mass Spectrometry for Drug Metabolism Studies* Walter A. Korfmacher, 2009-11-03 The first edition of this now classic work helped to establish mass spectrometry as the premier tool for drug metabolism studies Completely rewritten from start to finish *Using Mass Spectrometry for Drug Metabolism Studies* Second Edition brings medicinal chemists and mass spectrometry professionals up to speed with the rapid advances in the field *Proteomics* C. David O'Connor, B. David Hames, 2007-11-01 *Proteomics Methods Express* identifies the most powerful new technologies and presents them in a way that allows their robust implementation The focus is on proteomic methods and strategies that are reliable and of general applicability Each chapter presents descriptions of what can and cannot be achieved with the relevant procedures so that readers can make informed judgments prior to establishing the methods in house Every chapter discusses the merits and limitations of various approaches then provides tried and tested protocols with hints and tips for success and troubleshooting for when things go wrong **Gel Electrophoresis** Sameh Magdeldin, 2012-04-04 As a basic concept gel electrophoresis is a biotechnology technique in which macromolecules such as DNA RNA or protein are fractionated according to their physical properties such as molecular weight or charge These molecules are forced through a porous gel matrix under electric field enabling uncounted applications and uses Delivered between your hands a second book of this Gel electrophoresis series *Gel Electrophoresis Advanced Techniques* covers a part but not all applications of this versatile technique in both medical and life science fields We try to keep the contents of the book crisp and comprehensive and hope that it will receive overwhelming interest and deliver benefits and valuable information to the readers **Study of Primary Amines for Optimum Nucleophilic Cleavage of Cyanylated Cysteinyl Proteins During the Development of an 'on-line' System for the Disulfide Mass Mapping of Cystinyl Proteins** José Luis Gallegos-Pérez, 2005 *Applications of Mass Spectrometry in Life Safety* Crisan Popescu, Alina D. Zamfir, Nicolae Dinca, 2008-09-02 Mass spectrometry MS along with its hyphenated techniques is capable of high throughput sensitivity accuracy and selectivity for the analysis of structure and composition of almost any product Like in electrophoresis MS separates molecules based on the mass to charge ratio In case of gel electrophoresis SDS PAGE a well known and efficient bioanalytical technique proteins bear negative charges but have the same charge density so proteins are separated according to their size Similarly in case of MS analysis proteins carry the same charge and are separated by their molecular weight Unlike SDS PAGE however modern ultra high resolution MS discerns very small mass differences and can resolve and completely identify in a single experiment species of the same

nominal mass in complex biological mixtures Consequently MS can be used for the structural characterization identification and sensitive detection of mixtures of biomolecules or for assessing the quality of isolated proteins purity integrity or post translational modifications for example carbohydrates nucleic acids drugs metabolites pollutants etc In the post genome era MS is continuously developing as one of the most reliable analytical method for elucidating the structure of molecules originating from various biological matrices The potential of MS for high sensitive structural analyses became unsurpassable after the introduction of electrospray ESI and matrix assisted laser desorption ionization MALDI methods on one hand and the possibility to deduce in detail unknown biopolymer structures by highly accurate molecular mass measurement followed by sequencing using dissociation techniques based on multiple stage MS on the other
