The second edition of *Microorganisms in Foods 7* Microbiological Testing in Food Safety Management updates and expands on information on the role of microbiological testing in modern food safety management systems After helping the reader understand the often confusing statistical concepts underlying microbiological sampling the second edition explores how risk assessment and risk management can be used to establish goals such as a tolerable levels of risk Appropriate Levels of Protection Food Safety Objectives or Performance Objectives for use in controlling foodborne illness Guidelines for establishing effective management systems for control of specific hazards in foods are also addressed including new examples for pathogens and indicator organisms in powdered infant formula *Listeria monocytogenes* in deli meats enterohemorrhagic *Escherichia coli* in leafy green vegetables viruses in oysters and *Campylobacter* in poultry In addition a new chapter on application of sampling concept to microbiological methods expanded chapters covering statistical process control investigational sampling environmental sampling and alternative sampling schemes The respective roles of industry and government are also explored recognizing that it is through their collective actions that effective food safety systems are developed and verified Understanding these systems and concepts can help countries determine whether imported foods were produced with an equivalent level of protection *Microorganisms in Foods 7* is intended for anyone using microbiological testing or setting microbiological criteria whether for governmental food inspection and control or industrial applications It is also intended for those identifying the most effective use of microbiological testing in the food supply chain For students in food science and technology this book provides a wealth of information on food safety management principles used by government and industry with many references for further study The information was prepared by the International Commission on Microbiological Specifications for Foods ICMSF The ICMSF was formed in response to the need for internationally acceptable and authoritative decisions on microbiological limits for foods in international commerce The current membership consists of fifteen food microbiologists from twelve countries drawn from government universities and food processing and related industries

HACCP and ISO 22000 Ioannis S. Arvanitoyannis, 2009-11-09

Food Safety is an increasingly important issue Numerous food crises have occurred internationally in recent years the use of the dye Sudan Red I the presence of acrylamide in various fried and baked foods mislabelled or unlabelled genetically modified foods and the outbreak of variant Creutzfeldt Jakob disease originating in both primary agricultural production and in the food manufacturing industries Public concern at these and other events has led government agencies to implement a variety of legislative actions covering many aspects of the food chain This book presents and compares the HACCP and ISO 22000 2005 food safety management systems These systems were introduced to improve and build upon existing systems in an attempt to address the kinds of failures which can lead to food crises

Numerous practical examples illustrating the application of ISO 22000 to the manufacture of food products of animal origin are presented in this extensively referenced volume. After an opening chapter which introduces ISO 22000 and compares it with the well established HACCP food safety management system, a summary of international legislation relating to safety in foods of animal origin is presented. The main part of the book is divided into chapters which are devoted to the principle groups of animal derived food products: dairy, meat, poultry, eggs and seafood. Chapters are also included on catering and likely future directions. The book is aimed at food industry managers and consultants, government officials responsible for food safety, monitoring researchers and advanced students interested in food safety.
