Thermal and Acoustic Insulation R. M. E. Diamant, 2014-05-12 Thermal and Acoustic Insulation deals with general aspects of thermal insulation condensation properties of inorganic insulation materials organic high void insulation materials glass and glazing The book also describes noise insulation computerized insulation calculations fire properties of insulation materials The book explains thermal insulation heat transfer through conduction convection radiation the theory of water vapor diffusion and dehumidification The two types of insulation materials in common use prevent the passage of radiant heat through reflection or by impede the flow of conducted heat The engineer should choose insulation materials with a low thermal conductivity that also have a very high void content The book suggests in practice a material with a k value of 0.035 The other properties of insulation materials are mechanical strength physical resistance chemical resistance temperature limits fire resistance hygroscopy fungoid resistance and pest resistance The text describes a variety of materials are suitable for insulation such as gypsum foamed asbestos foam glass glass fiber wool expanded perlite vermiculite and foamed plastics The book will prove beneficial for architects for computer programmers involved in insulation for engineers working in building construction insulation fire prevention as well as for private house or corporate building owners *Materials for Energy Efficiency and Thermal Comfort in Buildings* Matthew R Hall, 2010-04-21 Almost half of the total energy produced in the developed world is inefficiently used to heat cool ventilate and control humidity in buildings to meet the increasingly high thermal comfort levels demanded by occupants The utilisation of advanced materials and passive technologies in buildings would substantially reduce the energy demand and improve the environmental impact and carbon footprint of building stock worldwide *Materials for energy efficiency and thermal comfort in buildings* critically reviews the advanced building materials applicable for improving the built environment Part one reviews both fundamental building physics and occupant comfort in buildings from heat and mass transport hygrothermal behaviour and ventilation on to thermal comfort and health and safety requirements Part two details the development of advanced materials and sustainable technologies for application in buildings beginning with a review of lifecycle assessment and environmental profiling of materials The section moves on to review thermal insulation materials materials for heat and moisture control and heat energy storage and passive cooling technologies Part two concludes with coverage of modern methods of construction roofing design and technology and benchmarking of facades for optimised building thermal performance Finally Part three reviews the application of advanced materials design and technologies in a range of existing and new building types including domestic commercial and high performance buildings and buildings in hot and tropical climates This book is of particular use to mechanical electrical and HVAC engineers architects and low energy building practitioners worldwide as well as to academics and researchers in the fields of building physics civil and building engineering and materials science Explores improving energy efficiency and thermal comfort through material selection and sustainable technologies Documents the development of advanced materials
