

Mobile cranes and power lines

Injuries and fatalities resulting from crane booms and cables contacting live power lines account for a significant percentage of construction site accidents. In a July 1985 "Alert," the National Institute for Occupational Safety and Health reported 115 fatalities, 200 permanent total disabilities and an additional 2,000 extremely severe injuries for 1981 alone. The Construction Safety Association of Ontario reported 123 deaths involving mobile cranes in Ontario construction for 1969-1988. Contact with an overhead power line was involved in 48 of the 123 fatalities.

2. This data sheet deals only with the operation of mobile cranes near energized power lines and not with general operating practices for mobile cranes. (See Data Sheets 287, 359, 558 and 630 for more information on general operation of cranes.) The purpose of this sheet is to help reduce injuries by giving owners and operators information and guidelines on how contacts occur and how they can be avoided. The goal is to eliminate power line contacts through informed and responsible crane operation.

Hazards of operation near power lines

3. The safe operation of a mobile crane in ordinary lifting and carrying operations requires skill and training on the part of the operator and the undivided attention of all crew members. Operation of a crane near (within two boom lengths) of a power line is dangerous and must be recognized as a hazardous operation that requires extra precautions, including the designation of a person whose only duty is to observe clear-

ance of the equipment and give timely warning.

4. Factors frequently associated with accidents when operating mobile cranes near overhead power lines are:

- Movement of loads to and from storage areas located under a power line
- Highway construction and maintenance, including placing and removing concrete traffic barriers or guard rails on highways with adjacent and crossing power lines
- Highway bridge construction near energized lines
- Picking up and carrying a light load across a field on an "off road" accessory path or along a highway
- Core or post hole drilling or pile driving near energized lines
- Moving crane near energized lines
- Operating parallel to power line and swinging in the wrong direction
- Booming out or swinging into an energized wire that appears further away because of the difficulty in judging distance
- While erecting or replacing outdoor advertisements along roadways (i.e., billboards).

Applicable regulations

5. OSHA provides regulations applicable within the United States for safe operation of cranes near power lines in 29 CFR, 1926.550(a)(15)-Cranes and Derricks.¹ This subsection covers non-energized power lines; mandates minimum clearance between power lines and crane or load, in operation and in transit; requires the designation of a signal person or spotter to
