Models Of My Life Herbert A Simon:

Models of My Life Herbert A. Simon, 1996-10-08 In this candid and witty autobiography Nobel laureate Herbert A. Simon looks at his distinguished and varied career continually asking himself whether and how what he learned as a scientist helps to explain other aspects of his life. A brilliant polymath in an age of increasing specialization, Simon is one of those rare scholars whose work defines fields of inquiry. Crossing disciplinary lines in half a dozen fields, Simon's story encompasses an explosion in the information sciences, the transformation of psychology by the information processing paradigm, and the use of computer simulation for modeling the behavior of highly complex systems. Simon's theory of bounded rationality led to a Nobel Prize in economics, and his work on building machines that think, based on the notion that human intelligence is the rule-governed manipulation of symbols, laid conceptual foundations for the new cognitive science. Subsequently contrasting metaphors of the maze, Simon's view of the mind, neural nets, have dominated the artificial intelligence debate. There is also a warm account of his successful marriage and of an unconsummated love affair, letters to his children, columns, a short story, and political and personal intrigue in academe.

Models of My Life, 1991 *Models of a Man* Mie Augier, James G. March, 2004-03-26 Essays that pay tribute to the wide-ranging influence of the late Herbert Simon by friends and colleagues. Herbert Simon (1916-2001) in the course of a long and distinguished career in the social and behavioral sciences made lasting contributions to many disciplines including economics, psychology, computer science, and artificial intelligence. In 1978 he was awarded the Nobel Prize in economics for his research into the decision-making process within economic organizations. His well-known book *The Sciences of the Artificial* addresses the implications of the decision-making and problem-solving processes for the social sciences. This book, the title a variation on the title of Simon's autobiography *Models of My Life*, is a collection of short essays, all original, by colleagues from many fields who felt Simon's influence and mourn his loss. Mixing reminiscence and analysis, the book represents a small acknowledgment of a large debt. Each of the more than forty contributors was asked to write about the one work by Simon that he or she had found most influential. The editors then grouped the essays into four sections: Modeling Man, Organizations and Administration, Modeling Systems and Minds, and Machines. The contributors include such prominent figures as Kenneth Arrow, William Baumol, William Cooper, Gerd Gigerenzer, Daniel Kahneman, David Klahr, Franco Modigliani, Paul Samuelson, and Vernon Smith. Although they consider topics as disparate as Is Bounded Rationality Unboundedly Rational and Personal Recollections from 15 Years of Monthly Meetings, each essay is a testament to the legacy of Herbert Simon: to see the unity rather than the divergences among disciplines.

Arguments that Count Rebecca Slayton, 2013-08-16 How differing assessments of risk by physicists and computer scientists have influenced public debate over nuclear defense In a rapidly changing world we rely upon experts to assess the promise and risks of new technology But how do these experts make sense of a highly uncertain future In Arguments that Count Rebecca Slayton offers an important new perspective Drawing on new historical documents and interviews as well as perspectives in science and technology studies she provides an original account of how scientists came to terms with the unprecedented threat of nuclear armed intercontinental ballistic missiles ICBMs She compares how two different professional communities physicists and computer scientists constructed arguments about the risks of missile defense and how these arguments changed over time Slayton shows that our understanding of technological risks is shaped by disciplinary repertoires the codified knowledge and mathematical rules that experts use to frame new challenges And significantly a new repertoire can bring long neglected risks into clear view In the 1950s scientists recognized that high speed computers would be needed to cope with the unprecedented speed of ICBMs But the nation's elite science advisors had no way to analyze the risks of computers so used physics to assess what they could radar and missile performance Only decades later after establishing computing as a science were advisors able to analyze authoritatively the risks associated with complex software most notably the risk of a catastrophic failure As we continue to confront new threats including that of cyber attack Slayton offers valuable insight into how different kinds of expertise can limit or expand our capacity to address novel technological risks

Vorsorgen in der Moderne Nicolai Hannig, Malte Thießen, 2017-09-25 Vorsorge ist überall Als Gesundheits Kriegs oder Krisenprävention als Versicherung Verhütung kriminellen Verhaltens oder Vorbeugung sozialer Probleme Vorsorgen ist längst zum Alltag geworden Die Autoren des Bandes erkunden dieses moderne Gesellschaftsphänomen und fragen nach seinen Voraussetzungen und Folgen Sie widmen sich den Anbietern und Empfängern Anhängern und Gegnern den Profiteuren und Leidtragenden Die Studie bietet damit erstmals eine ebenso facettenreiche wie fundierte Gesellschaftsgeschichte der Vorsorge und eröffnet neue Einblicke in den Wandel moderner Gesellschaften Mastering Public Administration Jos C.
