

Chapter 3

Chemical Compounds and Bonding

Solutions for Practice Problems

Student Textbook page 74

1. Determine ΔEN for each bond shown. Indicate whether each bond is ionic or covalent.

What Is Required?

You have to determine the electronegativity difference between the bonded atoms listed and decide if it is an ionic or covalent bond.

What Is Given?

The identity of each element in the chemical bond is given.

Plan Your Strategy

Look up the electronegativity of each given element in Figure 3.6, student textbook page 71. For each bond combination, subtract the lower electronegativity value from the higher value to get the ΔEN for the bond. From Figure 3.8, student textbook page 73, you can see that a ΔEN value between 0.0 and 1.7 will likely be covalent, while a value between 1.7 and 3.3 will likely be ionic.

Act on Your Strategy

Check Your Solution

An ionic bond will fall in the ΔEN range of 1.7–3.3. A covalent bond will fall in the ΔEN range of 0.0–1.7. Double check your electronegativity values from Figure 3.6. None of your answers should be negative values.

Student Textbook page 76

2. Problem

For each bond below, determine ΔEN . Is the bond ionic or covalent?

The breadth of scientific and technological interests in the general topic of photochemistry is truly enormous and includes for example such diverse areas as microelectronics atmospheric chemistry organic synthesis non conventional photoimaging photosynthesis solar energy conversion polymer technologies and spectroscopy This Specialist Periodical Report on Photochemistry aims to provide an annual review of photo induced processes that have relevance to the above wide ranging academic and commercial disciplines and interests in chemistry physics biology and technology In order to provide easy access to this vast and varied literature each volume of Photochemistry comprises sections concerned with photophysical processes in condensed phases organic aspects which are sub divided by chromophore type polymer photochemistry and photochemical aspects of solar energy conversion Volume 34 covers literature published from July 2001 to June 2002 Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis

Total Food Keith W. Waldron, Graham K. Moates, Craig Barry Faulds, 2010 This Proceedings Volume provides an overview of current research and development presented at the Total Food 2009 International Conference in Norwich April 2009 The Total Food series of biennial international conferences was initiated in 2004 by the Royal Society of Chemistry Food Group and the Institute of Food Research Norwich The aim of Total Food is to debate global research and development relevant to exploiting the whole food crop rather than the limited proportion that is consumed at present For example many vegetables are subjected to a high degree of trimming during post harvest processing and many parts including the outer leaves and stems are often disposed of by landfill Much of the wasted material is potentially food grade and may also contain important ingredients for further exploitation and the volumes involved are considerable In the EC over 500 000 tonnes of onion waste are disposed of per year In some cases up to 65% of food grade material may be discarded during processing and the EC funded AWARENET report 2004 indicated that up to 222 million tonnes of food chain waste from all food processing sectors are produced annually across the EU The book is multidisciplinary and international in nature presenting the latest expertise and covers a broad spectrum of R D which is being brought to bear in the quest for sustainability Areas covered include the minimisation of waste through water recycling and energy recovery value added products from plants and food chain wastes and the exploitation of low value residues for the production of biofuels Since the Total Food series began the issue of food security has become prominent The increasing

global population in conjunction with the use of crops for biofuel production mean that the more efficient exploitation of biomass will be required. The Total Food conferences are well placed to provide regular forums to highlight recent developments and to facilitate knowledge transfer between representatives of the agri food and increasingly non food industries, scientific research community, legal experts on food related legislation and waste management and consumer organisations.
