## 2. INSULATION

Insulation is the process of reducing the heat loss from a building or a system. It is done by using materials that have a low thermal conductivity. This means that they do not allow heat to pass through them easily. Insulation is used in many places, including walls, roofs, floors, and pipes. It helps to keep buildings warm in winter and cool in summer, and it also helps to save energy by reducing the need for heating and cooling.

**Table 2: Insulation materials**
