Hardaway, 2011-02-18 This meticulously documented work sets forth the major causes of the greatest asset bubble in world economic history, the American housing bubble, which began in 1940 and collapsed in 2007. In the aftermath of the American housing collapse in 2007, many ask why. *The Great American Housing Bubble: The Road to Collapse* asks a different and more fundamental question: how the bubble was created in the first place. To answer that question, it examines the causes, both political and economic, of the American housing bubble created between 1940 and 2007. Those causes encompass everything from federal income tax subsidies for housing to local exclusionary policies, banking, accounting, real estate appraisal and credit agency rating practices and policies. The book also takes into account the impact of greed, government regulation, speculation and psychology, including blind faith in investment advisors, on the

creation of the greatest asset bubble in the economic history of the world The author takes a comparative historical approach examining the current crisis in the light of notorious bubbles of the past In the end he concludes that the events precipitating the most recent collapse can be traced at least in part not to too little government regulation but to too much

Political Standards Karthik Ramanna, 2015-11-09 Prudent verifiable and timely corporate accounting is a bedrock of our modern capitalist system In recent years however the rules that govern corporate accounting have been subtly changed in ways that compromise these core principles to the detriment of the economy at large These changes have been driven by the private agendas of certain corporate special interests aided selectively and sometimes unwittingly by arguments from business academia With Political Standards Karthik Ramanna develops the notion of thin political markets to describe a key problem facing technical rule making in corporate accounting and beyond When standard setting boards attempt to regulate the accounting practices of corporations they must draw on a small pool of qualified experts but those experts almost always have strong commercial interests in the outcome Meanwhile standard setting rarely enjoys much attention from the general public This absence of accountability Ramanna argues allows corporate managers to game the system In the profit maximization framework of modern capitalism the only practicable solution is to reframe managerial norms when participating in thin political markets Political Standards will be an essential resource for understanding how the rules of the game are set whom they inevitably favor and how the process can be changed for a better capitalism
