Saving Forest Ecosystems Robert L. Edmonds, 2021-02-02 After the first Euro American settlers arrived in Seattle in the 1850s the surrounding old growth forests were rapidly harvested for lumber causing environmental degradation and displacing native peoples Conflicts about the future of Pacific Northwest forests have continued since then Only recently have academics government agencies industry small private landowners tribes and environmental organizations come together to develop plans to protect the remaining old growth forests wildlife streams and fish as well as providing environmentally friendly forest products Practicing sustainable forestry maintaining healthy forests that are less susceptible to fire insects and diseases and fostering public enjoyment are now the main goals of forest management However conflicts still exist and with climate change a looming threat it is important to realize that forests give us much more than lumber Robert L Edmonds professor emeritus at the School of Environmental and Forest Sciences University of Washington UW wrote this book to bring attention to the sustainability of natural resources He describes how Washington State s forests and the practice of forestry have changed through time and how these changes relate to the long history of research and teaching at the UW Its scope extends beyond Washington many of the principles of sustainable forestry developed by faculty have been adopted worldwide

making it the definitive statement on suburbia at the beginning of the twenty first century **The Next Social Contract** Wayne Gabardi,2017-05-15 In his provocative book *The Next Social Contract* Wayne Gabardi rigorously considers the fate of animals in the twenty first century He claims that if we are to address the challenges raised by the Anthropocene the period where nonhuman beings tend to be mere extras often subsumed under the umbrella notion of nature we need to radically rethink our basic ethical outlook and develop a new more than human social contract Gabardi s wide ranging and multidisciplinary analysis focuses on four principal battlegrounds of animal biopolitics in the twenty first century the extinction of wild animals the crisis of oceanic animals industrialized farm animals and the future of industrial agribusiness and the situation of contact zone animals moving into human occupied habitats In his recasting of the social contract Gabardi envisions a culture shift in human animal relations toward posthumanism that features the ethical and political prioritization of animal life so it is on par with that of human well being *Cities* Monica L. Smith,2019-04-18 A FASCINATING INVESTIGATION INTO THE HISTORY OF CITIES WHY DID THEY OCCUR HOW HAVE THEY EVOLVED WHY DO SO MANY OF US CHOOSE TO LIVE IN THEM AND HOW DO THEY AFFECT US Monica Smith is the person best qualified to write a book about the big problems raised by the increasing concentration of the human population into cities She also has a gift for vivid writing that will make the science of cities come to life for the broad public I expect that *CITIES* will be a great read and will sell well Jared Diamond author of *Collapse* Over half of the world s population lives in an urban area and cities around the globe are getting bigger and bigger Love them or hate them more and more of us are choosing to live in them *Cities* investigates the following intriguing questions why did cities start to occur around 6 000 years ago how have they evolved why do so many of us choose to live in them how do they affect us and what does the future hold at a time when we re increasingly connected by technology In *Cities* Monica L Smith points out that even if you don t live in a city your life is inevitably affected by one whether you commute into one for work sell coffee beans to a company that supplies urban coffee shops or host city dwelling tourists seeking adventure and respite from the city in your remote village Using fascinating anecdotes and research findings from her work as an archaeologist Smith also reveals that many of the problems that we associate with modern cities violence hyperconsumption etc have in fact always existed And more positively how many of the things that draw us to cities in modern times educational and economic opportunities social mobility culture are the things that have drawn us to them since they first appeared She also makes the controversial argument that it s down to cities that the middle class exists and she examines why social movements flourish in cities in a way they rarely do in rural settings

In the Hearts of the Beasts Anne C. Rose,2020-02-13 Animals cannot use words to explain whether they feel emotions and scientific opinion on the subject has been divided Charles Darwin believed animals and humans share a common core of fear anger and affection Today most researchers agree that animals experience comfort or pain Around 1900 in the United States however where intelligence was the dominant interest in the lab and field animal emotion began as an accidental

question Organisms ranging from insects to primates already used to test learning displayed appetites and aversions that pushed psychologists and biologists in new scientific directions The Americans were committed empiricists and the routine of devising experiments observing and reflecting permitted them to change their minds and encouraged them to do so By 1980 the emotional behavior of predatory ants fearful rats curious raccoons resourceful bats and shy apes was part of American science In this open ended environment the scientists personal lives their families trips abroad and public service also affected their professional labor The Americans kept up with the latest intellectual trends in genetics evolution and ethology and they sometimes pioneered them But there is a bottom up story to be told about the scientific consequences of animals and humans brought together in the pursuit of knowledge The history of the American science of animal emotions reveals the ability of animals to teach and scientists to learn Wings of the Gods Peter Gardella, Laurence Krute, 2024 Wings of the Gods surveys the many roles that birds have played in the development of religions from legends rituals costumes wars and spiritual disciplines to the current ecological crisis Peter Petra Gardella and Laurence Krute both scholars and birdwatchers transcend a narrow focus on humanity to explore the agency of birds in world history Welcome to Subirdia John M. Marzluff, 2014-09-30 Discusses how a large number of species of birds and other smaller animals have adapted to living in suburban and urban areas and provides ten strategies that can be used to create a friendlier environment in which they can continue to thrive Legions of Pigs in the Early Medieval West Jamie Kreiner, 2020-10-27 An exploration of life in the early medieval West using pigs as a lens to investigate agriculture ecology economy and philosophy From North Africa to the British Isles pigs were a crucial part of agriculture and culture in the early medieval period Jamie Kreiner examines how this ubiquitous species was integrated into early medieval ecologies and transformed the way that people thought about the world around them In this world even the smallest things could have far reaching consequences Kreiner tracks the interlocking relationships between pigs and humans by drawing on textual and visual evidence bioarchaeology and settlement archaeology and mammal biology She shows how early medieval communities bent their own lives in order to accommodate these tricky animals and how in the process they reconfigured their agrarian regimes their fiscal policies and their very identities In the end even the pig s own identity was transformed by the close of the early Middle Ages it had become a riveting metaphor for Christianity itself Nature Obscura Kelly Brenner, 2020-02-26 Brenner s smart debut is ideal for those with a deep interest in nature Publishers Weekly PNBA Book Awards finalist Washington State Book Awards finalist With wonder and a sense of humor Nature Obscura author Kelly Brenner aims to help us rediscover our connection to the natural world that is just outside our front door we just need to know where to look Through explorations of a rich and varied urban landscape Brenner reveals the complex micro habitats and surprising nature found in the middle of a city In her hometown of Seattle which has plowed down hills cut through the land to connect fresh and saltwater and paved over much of the rest she exposes a diverse range of strange and unknown creatures From shore to wetland forest to neighborhood park

and graveyard to backyard Brenner uncovers how our land alterations have impacted nature for good and bad through the wildlife and plants that live alongside us often unseen These stories meld together in the same way our ecosystems species and human history are interconnected across the urban environment *Wild Houston* Suzanne Simpson, John Williams, 2023-09-26 This vibrant informative guide shows the unexpected and amazing nature in Houston and the surrounding area just waiting to be explored Houston is more than just a bustling metroplex it s full of amazing wildlife You just need to know where to find it Equal parts natural history field guide and trip planner Wild Houston has something for everyone This handy yet extensive guide looks at the factors that shape local nature and profiles over 100 local species from the Barred Owl and the Western Rat Snake to the Houston Burrowing Crayfish the Rainbow Scareb and the Nine banded Armadillo Also included are descriptions of day trips that help you explore natural wonders on hiking trails in public parks and in your own backyard *Killer Cities* Nigel Thrift, 2021-02-10 Killer Cities uses a combination of social theory polemic and close attention to empirical detail to tell the story of how and why cities cause mass animal death and in the process hasten the destruction of the planet This book is not just a lament however It is an attempt to navigate out of this mess of planned and unplanned violence towards a world in which cities no longer act as killers but become aligned with the lives of other beings It offers pragmatic ways of diminishing the death toll and changing mindsets without ever minimizing the dilemmas that inevitably will have to be faced Killer cities can be rehabilitated so that they offer brighter paths towards the future for animals for human beings and for the planet A new urban geography could be within our grasp Indeed it has to be for all of our sakes
