Wind Loading Nicholas John Cook, 1999-10-22 All buildings in the UK must conform to the published wind code BS 6399 2 The strengths and weaknesses of the code are examined and questions commonly asked are addressed in this guide It explains the objectives the main changes in the code and their impact on design loads **Loading Structures (UM Press)** Hassanali Mosalman Yazdi, 2013 Loading structures is one of the most significant stages in structural design procedures Consideration of various loads which may be subjected to a structure during its lifetime is very important Hence it needs a special consideration for training students and designers Students learn very briefly about the loading and distribution of loads in different courses However this subject is so important and it needs special attention to make students familiar with the loading rules as well as usage of their related building codes in one book or in one subject Regarding the necessity of understanding this subject for the students and designers I decided to write this book to introduce the basics and principles in considering different loads and their distribution methods on the structural elements Thereby this book is prepared in 6 chapters including Dead and live load and their distribution Wind load Seismic load Soil load Hydrostatic load and Crane load One of the noticeable parts of this book is chapter two which focuses on the wind load based on the Malaysian standard code

Principles of Element Design Peter Rich, Yvonne Dean, 2012-10-02 The construction of buildings is learnt through experience and the inheritance of a tradition in forming buildings over several thousand years Successful construction learns from this experience which becomes embodied in principles of application Though materials and techniques change various elements have to perform the same function Principles of Element Design identifies all the relevant elements and then breaks these elements down into all their basic constituents making it possible for students to fully understand the given theory and principles behind each part As all building projects are subject to guidance through the Building Regulations and British Standards this book gives an immediate reference back to relevant information to help practitioners and contractors identify key documents needed Yvonne Dean B A Hons B A Open RIBA an architect energy consultant and materials technologist She also has 15 years experience as a lecturer travels widely and is a guest lecturer at many universities She pioneered an access course for Women into Architecture and Building which has been used as a template by others and has been instrumental in helping to change the teaching of technology for architects and designers Peter Rich AA Dipl Hons Architect started his career with 14 years experience as a qualified architectural technician He then joined the AA School of Architecture working with Bill Allen and John Bickerdike after his graduation later becoming a partner of Bickerdike Allen Rich and Partners He also taught building construction at the Bartlett School of Architecture University College London and architectural design at the Polytechnic of North London He now acts as a Consultant **Guide to the Use of the Wind Load Provisions of ASCE 7-95** Kishor C.
