Zoología aplicada Francisco Padilla Álvarez,Antonio E. Cuesta López,2003 Esta publicación no se puede considerar como un manual de Zoología en sentido estricto debido a que se aborda el estudio de esta materia desde un punto de vista que busca la aplicación de los conocimientos Los autores describen conceptos zoológicos básicos junto a diferentes planteamientos prácticos de tipo zootcnico El planteamiento zootcnico resulta un tanto peculiar debido a que no se incluyen producciones animales muy conocidas como pueden ser las que comprenden el ganado vacuno porcino o caprino muy conocidas y ampliamente tratadas en otros manuales Nuestro enfoque se dirige hacia producciones poco usuales o regladas como puede ser la lombricultura o cría de lombrices de tierra y la apicultura

**Zoología de artrópodos** Nancy Soraya Carrejo Gironza,Ranulfo Gonzalez Obando,2012-02-07 El libro sirve como una guía introductoria al conocimiento de los grupos de Artropoda en los niveles jerárquicos de subphylum clases subclases y ordenes Es complemento de las clases magistrales de un curso sobre Zoología de Artropoda Para facilitar esta labor la hemos dividido en doce prácticas en las cuales se brinda al estudiante orientación y una serie de pasos que le permite hacer un reconocimiento morfológico y anatómico detallado de todo el organismo de estudio y sus partes En cada práctica se ha dejado espacios en blanco en los cuales el estudiante hace directamente sus ilustraciones en lápiz y/o completa los cuadros y preguntas

**Diccionario de hidrología y ciencias afines**

Guadalupe de la Lanza-Espino,1999-01-01 En estos tiempos de especialización extrema y de parcelación del conocimiento resultan muy útiles para la ciencia obras generales creadas con una intención unificadora que sirvan de apoyo y consulta Esto es particularmente cierto en el caso de una ciencia tan amplia como la hidrología cuyo objetivo de estudio tiene relación con todas o casi todas las disciplinas del conocimiento humano EL agua participa de alguna forma en todos los procesos físicos que ocurren en el planeta y la mayoría de las ciencias se encargan de su estudio directa o indirectamente Desafortunadamente no existe en nuestro país una oferta amplia de textos de consulta en los que hidrólogos o científicos relacionados con ciencias afines puedan apoyarse Así se ven obligados a recorrer un camino indirecto acudiendo a textos glosarios o catálogos de otras disciplinas como la limnología o la oceanografía El presente volumen nació de la observación frecuente de estos problemas y deficiencias y compila tras un larga investigación la mayor parte de las definiciones que tienen relación con el objeto de estudio de la hidrología Los múltiples problemas que acarreaba el uso indiscriminado de voces de lenguas extranjeras principalmente del inglés fue una de las preocupaciones que motivaron la creación de un diccionario como el presente Constituye a pesar de su carácter no exhaustivo una valiosa ayuda tanto para alumnos como para docentes en el uso correcto de términos usuales y poco comunes en hidrología Cada una de las definiciones aun cuando fueron tomadas sin alteración de otras fuentes fueron cuidadosamente revisadas por personal especializado lo que constituye una garantía de claridad y precisión en cada uno de los términos que se tratan

*Advances in Comparative Immunology* Edwin L. Cooper,2018-08-07 Immunologists perhaps understandably most often concentrate on the human immune system, an anthropocentric focus that has resulted in a dearth of information about the immune function of all other species within the animal kingdom. However, knowledge of animal immune function could help not only to better understand human immunology but perhaps more importantly, it could help to treat and avoid the blights that affect animals which consequently affect humans. Take, for example, the mass death of honeybees in recent years; their demise resulting in much less pollination poses a serious threat to numerous crops and thus the food supply. There is a similar disappearance of frogs internationally, signaling ecological problems among them: fungal infections. This book aims to fill this void by describing and discussing what is known about non-human immunology. It covers various major animal phyla, its chapters organized in a progression from the simplest unicellular organisms to the most complex vertebrates, mammals. Chapters are written by experts covering the latest findings and new research being conducted about each phylum. Edwin L. Cooper is a Distinguished Professor in the Laboratory of Comparative Immunology Department of Neurobiology at UCLA's David Geffen School of Medicine.
