Energy Production and Management in the 21st century IV S. Syngellakis, E. Magaril, H. Al-Kayiem, 2020-08-19 The future of energy production operation and management in a changing world is a major global topic The papers contained in this volume were presented at the 4th International Conference on Energy Production and Management The Quest for Sustainable Energy and focus on the comparison of conventional energy sources particularly hydrocarbons with a number of other ways of producing energy such as new technological developments based on renewable resources such as solar hydro wind and geothermal A key issue is the conversion of new sustainable sources of energy into useful forms electricity heat fuel while finding efficient ways of storage and distribution In many cases the challenges lie as much with production of such renewable energy at an acceptable cost including damage to the environment as with integration of those resources into the existing infrastructure This book features research on the ways in which more efficient use can be made of both conventional and new energy sources This relates to savings in energy consumption reduction of energy losses as well as the implementation of smart devices and the design of intelligent distribution networks Various topics are covered including Energy and the city Energy security Energy distribution Energy networks Processing of oil and gas emissions Pipelines Renewable energies Energy use in building Tight energy fields Energy and climate change Biomass and biofuels Environmental sustainability Energy business LNG

Modelling Batch Systems Using Population Balances, **Recycling of Plastics** Norbert Niessner, 2022-10-10 Plastics have a very important role to play in energy efficient and low carbon technologies of the present and future but for them to be classified as sustainable materials there is a great need for practical and economic recycling methods and infrastructure This book fills the gap for a modern comprehensive technical guide to recycling of plastics covering the whole value chain from raw materials to recycled materials All important recycling technologies mechanical chemical feedstock dissolution are discussed and compared to each other and alternative disposal methods such as energy recovery and gasification Collecting sorting and purification methods are also covered as are economic legal and political aspects A strong emphasis is placed on data comparability e g by standardized methods in measuring data Although this is a challenge to implement comparing data across technologies regions and stakeholders along the value chain yields important benefits Key instruments for such a target are lifecycle assessments LCAs which are calculated in a standard way across the chapters to calibrate the messages
