Forecasting And Big Data Analysis:

Big Data Analytics for Time-Critical Mobility Forecasting George A. Vouros, Gennady Andrienko, Christos Doulkeridis, Nikolaos Pelekis, Alexander Artikis, Anne-Laure Jousset, Cyril Ray, Jose Manuel Cordero, David Scarlatti, 2020-06-23 This book provides detailed descriptions of big data solutions for activity detection and forecasting of very large numbers of moving entities spread across large geographical areas. It presents state of the art methods for processing, managing, detecting and predicting trajectories and important events related to moving entities together with advanced visual analytics methods over multiple heterogeneous, voluminous, fluctuating and noisy data streams from moving entities, correlating them with data from archived data sources expressing e.g. entities characteristics, geographical information, mobility patterns, mobility regulations and intentional data. The book is divided into six parts. Part I discusses the motivation and background of mobility forecasting supported by trajectory oriented analytics and includes specific problems and challenges in the aviation, air traffic management and the maritime domains. Part II focuses on big data quality assessment and processing and presents novel technologies suitable for mobility analytics components. Next, Part III describes solutions toward processing and managing big spatio-temporal data, particularly enriching data streams and integrating streamed and archival data to provide coherent views of mobility and storing of integrated mobility data in large distributed knowledge graphs for efficient query answering. Part IV focuses on mobility analytics methods exploiting online processed, synopsisized and enriched data streams as well as offline integrated archived mobility data and highlights future location and trajectory prediction methods, distinguishing between short term and more challenging long term predictions. Part V examines how methods addressing data management, data processing and mobility analytics are integrated in big data architectures with distinctive characteristics compared to other known big data paradigmatic architectures. Lastly, Part VI covers important ethical issues that research on mobility analytics should address. Providing novel approaches and methodologies related to mobility detection and forecasting needs based on big data exploration, processing, storage and analysis, this book will appeal to computer scientists and stakeholders in various application domains.
