**Content-Based Video Retrieval** Milan Petkovic, Willem Jonker, 2013-06-29 The area of content based video retrieval is a very hot area both for research and for commercial applications In order to design effective video databases for applications such as digital libraries video production and a variety of Internet applications there is a great need to develop effective techniques for content based video retrieval One of the main issues in this area of research is how to bridge the semantic gap between low level features extracted from a video such as color texture shape motion and others and semantics that describe video concept on a higher level In this book Dr Milan Petkovi6 and Prof Dr Willem Jonker have addressed this issue by developing and describing several innovative techniques to bridge the semantic gap The main contribution of their research which is the core of the book is the development of three techniques for bridging the semantic gap 1 a technique that uses the spatio temporal extension of the Cobra framework 2 a technique based on hidden Markov models and 3 a technique based on Bayesian belief networks To evaluate performance of these techniques the authors have conducted a number of experiments using real video data The book also discusses domains solutions versus general solution of the problem Petkovi6 and Jonker proposed a solution that allows a system to be applied in multiple domains with minimal adjustments They also designed and described a prototype video database management system which is based on techniques they proposed in the book

**Applied Symbolic Dynamics And Chaos (Second Edition)** Hao Bailin, Zheng Wei-mou, 2018-05-11 Symbolic dynamics is a coarse grained description of dynamics It has been a long studied chapter of the mathematical theory of dynamical systems but its abstract formulation has kept many practitioners of physical sciences and engineering from appreciating its simplicity beauty and power At the same time symbolic dynamics provides almost the only rigorous way to understand global systematics of periodic and especially chaotic motion in dynamical systems In a sense everyone who enters the field of chaotic dynamics should begin with the study of symbolic dynamics However this has not been an easy task for non mathematicians On one hand the method of symbolic dynamics has been developed to such an

extent that it may well become a practical tool in studying chaotic dynamics both on computers and in laboratories On the other hand most of the existing literature on symbolic dynamics is mathematics oriented This book is an attempt at partially filling up this apparent gap by emphasizing the applied aspects of symbolic dynamics without mathematical rigor Contents Preface to the Second Edition Preface to the First Edition Introduction Symbolic Dynamics of Unimodal Maps Maps with Multiple Critical Points Symbolic Dynamics of Circle Maps Symbolic Dynamics of Two Dimensional Maps Application to Ordinary Differential Equations Counting the Number of Periodic Orbits Symbolic Dynamics and Grammatical Complexity Symbolic Dynamics and Knot Theory Appendix References Index Readership Researchers and students interested in chaotic dynamics Keywords Symbolic Dynamics ChaosReview Key Features No previous knowledge of dynamical systems theory is required in order to read this book The revisions concern mainly the application to ordinary differential equations via constructing two dimensional symbolic dynamics of the corresponding Poincare maps

**Advances in Assistive**

**Technologies** George A. Tsihrintzis, Maria Virvou, Anna Esposito, Lakhmi C. Jain, 2021-11-30 This book aims at exposing its readers to some of the most significant advances in assistive technologies. Assistive technologies develop devices to assist vulnerable people including elderly people, people with cognitive disabilities such as memory problems or dementia and people with functional disabilities such as those needing support in toileting, moving around, eating, bathing, dressing, grooming and taking personal care. The ever-increasing life expectancy and world population along with the emergence of new diseases and the regrettable continuation of armed conflicts press for development and availability of assistive technologies that offer people in need the opportunity to live secure and controlled lives with more active participation in society and at a reduced assistive cost. This task can be accomplished only with more advanced devices than traditional powered wheelchairs or eating/drinking devices including prosthetics, exoskeletons, visual and hearing aids, cognitive aids and devices enhanced with artificial intelligence. The book consists of an editorial note and an additional twelve (12) chapters, all of which have been written by authors who work on the corresponding chapter theme and are recognized for their significant research contributions. In more detail, the chapters in the book are organized into four parts, namely: i) Advances in Assistive Technologies in Healthcare; ii) Advances in Assistive Technologies in Medical Diagnosis; iii) Advances in Assistive Technologies in Mobility and Navigation; and iv) Advances in Privacy and Explainability in Assistive Technologies. This research book is directed towards professors, researchers, scientists, engineers and students in assistive technologies. It is also directed towards readers who come from other disciplines and are interested in becoming versed in some of the most recent assistive technologies. An extensive list of bibliographic references at the end of each chapter guides its readers to probe further into the application areas of interest to them.
