Cash management

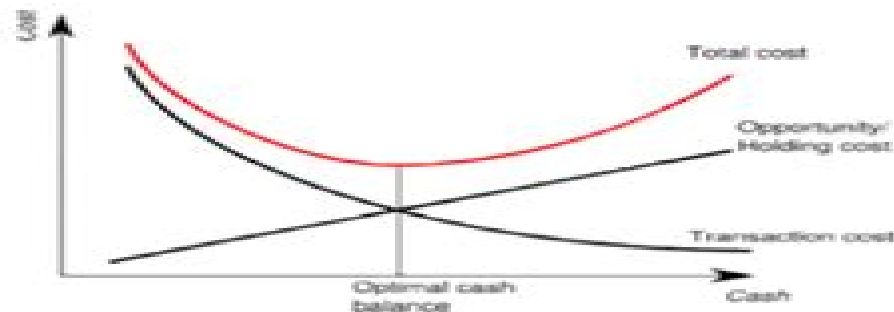

Functions of cash management

Maintaining optimum cash level

A number of mathematical models have been developed to determine the optimum cash balance. However the inventory model developed by William J. Baumol and the Stochastic model of M.H.Miller and Daniel Orr are mainly used to determine the optimum balance of cash

1. Baumol's Model (Inventory model) for cash management

William J. Baumol suggested that cash may be managed in the same way as any other inventory. He came to the conclusion that money can also be treated as a specific type of stock, one that is necessary when doing business. So the economic order quantity (EOQ) model of inventory management could be applied to cash management. It provides a useful conceptual foundation for the cash management problem.

Holding cost or carrying cost of cash is the interest income forgone due to not investing the cash in marketable securities or maintaining the cash in currency form (liquid cash). Transaction cost is the cost of converting the cash in to marketable securities and vice versa.
