1. Introduction

As a manager, you may want to reward employees based on their performance. How do you know how well they have done? How can you determine what departments or divisions have performed well? As a lender, how do you decide the borrower will be able to pay back as promised? As a manager of a corporation how do you know when existing capacity will be exceeded and enlarged capacity will be needed? As an investor, how do you predict how well the securities of one company will perform relative to that of another? How can you tell whether one security is riskier than another? We can address all of these questions through financial analysis.

Financial analysis is the selection, evaluation, and interpretation of financial data, along with other pertinent information, to assist in investment and financial decision-making. Financial analysis may be used internally to evaluate issues such as employee performance, the efficiency of operations, and credit policies, and externally to evaluate potential investments and the credit-worthiness of borrowers, among other things.

The analyst draws the financial data needed in financial analysis from many sources. The primary source is the data provided by the company itself in its annual report and required disclosures. The annual report comprises the income statement, the balance sheet, and the statement of cash flows, as well as footnotes to these statements. Certain businesses are required by securities laws to disclose additional information.

Besides information that companies are required to disclose through financial statements, other information is readily available for financial analysis. For example, information such as the market prices of securities of publicly-traded corporations can be found in the financial press and the electronic media daily. Similarly, information on stock price indices for industries and for the market as a whole is available in the financial press.

Writing Assignments Across University Disciplines Roger Graves, 2017-12-07 Writing Assignments Across the University Curriculum as a whole asks and answers these questions What kinds of documents do students write in a wide range of university degree programs in Canada How do instructors structure those writing assignments That is who is the audience for the assignments Do students get formative feedback as they develop their documents Do the patterns we found in a small liberal arts college Graves Hyland and Samuels 2010 occur in other kinds of universities We took our cue from an article by Anson and Dannels 2009 who pointed us toward the idea that students experience a curriculum through their degree progress in an academic program Consequently we needed to map the writing assignments according to how different departments organized these degree programs Results that were organized by curricular unit departments faculties or colleges or programs units were more significant than general statistics because students would progress through these courses to a degree Several chapters in the book describe how this kind of curricular mapping provided a spark for curricular reform in Engineering Education and an entire small university The last two chapters report on the instructors perspective on their assignments what they were intending to do and why they both resisted and engaged in curricular discussions

The Dialectics of Liquidity Crisis Chris Jefferis,2017-02-17 This book analyses the logic of applying the American Post Keynesian economist Hyman Minsky s Financial Instability Hypothesis FIH to the financial crisis of 2007 08 Arguing that most theories of financial crisis including Minsky s own only describe events but do not actually explain them the book surveys theories of financial crisis that have been developed to describe instability in the post WW2 US financial system and analyses them in their historical context The book argues that explanation of the financial crisis of 2007 08 should involve interpretation of the concept of risk which guides the construction and pricing of contemporary financial products such as derivatives and asset backed securities as a form of liquidity the concept that Minsky sought to explain the financial crises of the 1970s and 1980s with The book highlights the continuing relevance of Minsky s theory of liquidity crisis as immanent in a historical sense to the products and trading practices of modern finance because these products were developed to obviate the crisis dynamics that Minsky described Minsky s FIH can therefore inform historical understanding of the crisis of 2007 08 but is not directly explanatory itself The book explores explanation of the financial crisis of 2007 08 interpreting liquidity in practical historical terms as involving a process of development out of prior crisis dynamics Seeking to contribute to debates over the causes of the financial crisis of 2007 08 by blending a discussion of historicizing philosophy economic theory and contemporary financial banking and trading practices this work will be of great interest to scholars of international political economy heterodox economics and critical theory
