The Fractal Dimension of Architecture Michael J. Ostwald, Josephine Vaughan, 2016-09-01 Fractal analysis is a method for measuring analysing and comparing the formal or geometric properties of complex objects In this book it is used to investigate eighty five buildings that have been designed by some of the twentieth century's most respected and celebrated architects Including designs by Le Corbusier Eileen Gray Frank Lloyd Wright Robert Venturi Frank Gehry Peter Eisenman Richard Meier and Kazuyo Sejima amongst others this book uses mathematics to analyse arguments and theories about some of the world's most famous designs Starting with 625 reconstructed architectural plans and elevations and including more than 200 specially prepared views of famous buildings this book presents the results of the largest mathematical study ever undertaken into architectural design and the largest single application of fractal analysis presented in any field The data derived from this study is used to test three overarching hypotheses about social stylistic and personal trends in design along with five celebrated arguments about twentieth century architecture Through this process the book offers a unique mathematical insight into the history and theory of design

Twenty-Five Buildings Every Architect Should Understand Simon Unwin, 2014-11-17 *Twenty Five Buildings Every Architect Should Understand* is an essential companion to Simon Unwin's *Analysing Architecture* and part of the trilogy which also includes his *Exercises in Architecture* *Learning to Think as an Architect* Together the three books offer an introduction to the workings of architecture providing for the three

aspects of learning theory examples and practice Twenty Five Buildings focusses on analysing examples using the methodology offered by Analysing Architecture which operates primarily through the medium of drawing In this second edition five further buildings have been added to the original twenty from an even wider geographical area which now includes the USA France Italy Mexico Switzerland Spain Finland Germany Australia Norway Sweden India and Japan The underlying theme of Twenty Five Buildings Every Architect Should Understand is the relationship of architecture to the human being how it frames our lives and orchestrates our experiences how it can help us make sense of the world and contribute to our senses of identity and place Exploring these dimensions through a wide range of case studies that illustrate the rich diversity of twentieth and twenty first century architecture this book is essential reading for every architect

Digital Modernism Heritage Lexicon Cristiana Bartolomei, Alfonso Ippolito, Simone Helena Tanoue Vizioli, 2021-08-11 The book investigates the theme of Modernism 1920 1960 and its epigones as an integral part of tangible and intangible cultural heritage which contains the result of a whole range of disciplines whose aim is to identify document and preserve the memory of the past and the value of the future Including several chapters it contains research results relating to cultural heritage more specifically Modernism and current digital technologies This makes it possible to record and evaluate the changes that both undergo the first one from a material point of view the second one from the research point of view which integrates the traditional approach with an innovative one The purpose of the publication is to show the most recent studies on the modernist lexicon 100 years after its birth moving through different fields of cultural heritage from different forms of art to architecture from design to engineering from literature to history representation and restoration The book appeals to scholars and professionals who are involved in the process of understanding reading and comprehension the transformation that the places have undergone within the period under examination It will certainly foster the international exchange of knowledge that characterized Modernism Five Houses, 1976-1986 Anthony Ames, 1987 A description of the elephants and other wildlife in the Luangwa River Valley Zambia The animals are protected from molestation by man but the elephant is a threatened species due to shortage of food Drawing Architecture and the Urban Sam Jacoby, 2016-04-25 Drawing is an important means to analyse information and develop rigorous arguments both conceptually and visually Going beyond the how to drawing manual this book provides an instrumental approach to drawing especially computer generated drawings it outlines how drawings should be used to convey clear and analytical information in the process of design as well as the communication and discussion of a project In depth examples are provided how to communicate effectively The final section demonstrates how to transform case studies directly connecting an analytical approach with the design process Twenty Buildings Every Architect Should Understand Simon Unwin, 2010-02-25 Have you ever wondered how the ideas behind the world's greatest architectural designs came about What process does an architect go through to design buildings which become world renowned for their excellence This book reveals the secrets behind these buildings He asks you to read the

building and understand its starting point by analyzing its final form Through the gradual revelations made by an understanding of the thinking behind the form you learn a unique methodology which can be used every time you look at any building *AA Files*, 1983 *Le Corbusier, Paris - Chandigarh* Klaus-Peter Gast, 2000 This analysis of the principles underlying Le Corbusier's work shows his work in an entirely new light enhanced by previously unpublished drawings and photographs *Privacy and Publicity* Beatriz Colomina, 1996-02-28 Through a series of close readings of two major figures of the modern movement Adolf Loos and Le Corbusier Beatriz Colomina argues that architecture only becomes modern in its engagement with the mass media and that in so doing it radically displaces the traditional sense of space and subjectivity *Privacy and Publicity* boldly questions certain ideological assumptions underlying the received view of modern architecture and reconsiders the methodology of architectural criticism itself Where conventional criticism portrays modern architecture as a high artistic practice in opposition to mass culture Colomina sees the emerging systems of communication that have come to define twentieth century culture the mass media as the true site within which modern architecture was produced She considers architectural discourse as the intersection of a number of systems of representation such as drawings models photographs books films and advertisements This does not mean abandoning the architectural object the building but rather looking at it in a different way The building is understood here in the same way as all the media that frame it as a mechanism of representation in its own right With modernity the site of architectural production literally moved from the street into photographs films publications and exhibitions a displacement that presupposes a new sense of space one defined by images rather than walls This age of publicity corresponds to a transformation in the status of the private Colomina argues modernity is actually the publicity of the private Modern architecture renegotiates the traditional relationship between public and private in a way that profoundly alters the experience of space In a fascinating intellectual journey Colomina tracks this shift through the modern incarnations of the archive the city fashion war sexuality advertising the window and the museum finally concentrating on the domestic interior that constructs the modern subject it appears merely to house *A History of Housing in New York City* Richard Plunz, 2016-10-18 Since its emergence in the mid nineteenth century as the nation's metropolis New York has faced the most challenging housing problems of any American city but it has also led the nation in innovation and reform The horrors of the tenement were perfected in New York at the same time that the very rich were building palaces along Fifth Avenue public housing for the poor originated in New York as did government subsidies for middle class housing A standard in the field since its publication in 1992 *A History of Housing in New York City* traces New York's housing development from 1850 to the present in text and profuse illustrations Richard Plunz explores the housing of all classes with comparative discussion of the development of types ranging from the single family house to the high rise apartment tower His analysis is placed within the context of the broader political and cultural development of New York City This revised edition extends the scope of the book into the city's recent history adding three decades to the study covering

the recent housing bubble crisis the rebound and gentrification of the five boroughs and the ecological issues facing the next generation of New Yorkers More than 300 illustrations are integrated throughout the text depicting housing plans neighborhood changes and city architecture over the past 130 years This new edition also features a foreword by the distinguished urban historian Kenneth T Jackson Archival practices and sites in the contemporary art field Beatrice von Bismarck, Hans-Peter Feldmann, Hans Ulrich Obrist, 2002 This book documents and extends the exhibition project Interarchiv of the Kunstraum der Universität Leuburg in co operation with Hans Peter Feldmann and Hans Ulrich Obrist 1997 2002
