Urban Hydroinformatics Roland K. Price,Zoran Vojinovi?,2011 This book is an introduction to hydroinformatics applied
to urban water management It shows how to make the best use of information and communication technologies for
manipulating information to manage water in the urban environment The book covers the acquisition and analysis of data
from urban water systems to instantiate mathematical models or calculations which describe identified physical processes
The models are operated within prescribed management procedures to inform decision makers who are responsible to
recognized stakeholders The application is to the major components of the urban water environment namely water supply
treatment and distribution wastewater and stormwater collection treatment and impact on receiving waters and groundwater
and urban flooding Urban Hydroinformatics pays particular attention to modeling decision support through procedures
economics and management and implementation in both developed and developing countries The book is written with post
graduates researchers and practicing engineers who are involved in urban water management and want to improve the
scope and reliability of their systems **Subject Guide to Books in Print** ,1997 The Publishers' Trade List Annual
