Marcoulides, 1998-03-01 This volume introduces the latest popular methods for conducting business research The goal of each chapter author a leading authority in a particular subject area is to provide an understanding of each method with a minimum of mathematical derivations The chapters are organized within three general interrelated topics Measurement Decision Analysis and Modeling The chapters on measurement discuss generalizability theory latent trait and latent class models and multifaceted Rasch modeling The chapters on decision analysis feature applied location theory models data envelopment analysis and heuristic search procedures The chapters on modeling examine exploratory and confirmatory factor analysis dynamic factor analysis partial least squares and structural equation modeling multilevel data analysis modeling of longitudinal data by latent growth curve methods and structures and configural models of longitudinal categorical data Operations Research and Decision Aid Methodologies in Traffic and Transportation Management Martine Labbe, Gilbert Laporte, Katalin Tanczos, Philippe Toint, 2013-06-29 Every one relies on some kind of transportation system nearly every day Going to work shopping dropping children at school and many other cultural or social activities imply leaving home and using some form of transportation which we expect to be efficient and reliable Of course efficiency and reliability do not occur by chance but require careful and often relatively complex planning by transportation system managers both in the public and private sectors It has long been recognized that mathematics and more specifically operations research is an important tool of this planning process However the range of skills required to

cover both fields even partially is very large and the opportunities to gather people with this very diverse expertise are too few. The organization of the NATO Advanced Studies Institute on Operations Research and Decision Aid Methodologies in Traffic and Transportation Management in March 1997 in Balatonfured, Hungary, was therefore more than welcome and the group of people that gathered for a very studious two weeks on the shores of the beautiful lake Balaton did really enjoy the truly multidisciplinary and high scientific level of the meeting. The purpose of the present volume is to report in a chronological order the various questions that were considered by the lecturers and the students at the institute. After a general introduction to the topic, the first week focused on issues related to traffic modeling, mostly in an urban context.

Layout-Probleme geeignet sind. Damit ist ein problemorientiertes OR-Werk für modernste Ansprüche nicht nur komplett, sondern auch erfolgreich.

Intelligent and Fuzzy Techniques for Emerging Conditions and Digital Transformation Cengiz Kahraman, Selcuk Cebi, Sezi Cevik Onar, Basar Oztaysi, A. Cagri Tolga, Irem Ucal Sari, 2021-08-23. This book presents recent research in intelligent and fuzzy techniques. Emerging conditions such as pandemic wars, natural disasters, and various high technologies force people for significant changes in business and social life. The adoption of digital technologies to transform services or businesses through replacing non-digital or manual processes with digital processes or replacing older digital technology with newer digital technologies through intelligent systems is the main scope of this book. It focuses on revealing the reflection of digital transformation in our business and social life under emerging conditions through intelligent and fuzzy systems. The latest intelligent and fuzzy methods and techniques on digital transformation are introduced by theory and applications. The intended readers are intelligent and fuzzy systems researchers, lecturers, M.Sc. and Ph.D. students studying digital transformation. Usage of ordinary fuzzy sets and their extensions, heuristics and metaheuristics from optimization to machine learning from quality management to risk management makes the book an excellent source for researchers.

Metaheuristics Karl F. Doerner, Michel Gendreau, Peter Greistorfer, Walter Gutjahr, Richard F. Hartl, Marc Reimann, 2007-08-13. The aim of Metaheuristics Progress in Complex Systems Optimization is to provide several different kinds of information: a delineation of general metaheuristics methods, a number of state-of-the-art articles from a variety of well-known classical application areas, as well as an outlook to modern computational methods in promising new areas. Therefore, this book may equally serve as a textbook in graduate courses for students, as a reference book for people interested in engineering or social sciences, and as a collection of new and promising avenues for researchers working in this field. Highlighted are recent developments in the areas of Simulated Annealing, Path Relinking, Scatter Search, Tabu Search, Variable Neighborhood Search, Hyperheuristics, Constraint Programming, Iterated Local Search, GRASP, bio-inspired algorithms like Genetic Algorithms, Memetic Algorithms, Ant Colony Optimization, or Swarm Intelligence, and several other

paradigms **Supply Chain Engineering** Marc Goetschalckx, 2011-08-11 The focus of Supply Chain Engineering is the engineering design and planning of supply chain systems. There exists a very large variety of supply chain system types all with different goals, constraints, and decisions, but a systematic approach for the design and planning of any supply chain can be based on the principles and methods of system engineering. In this book, author Marc Goetschalckx presents material developed at the Georgia Tech Supply Chain and Logistics Institute, the largest supply chain and logistics research and education program in the world. The book can be roughly divided into four sections. The first section focuses on data management. Since most of planning and design requires making decisions today so that supply chain functions can be executed efficiently in the future, this section introduces forecasting principles and techniques. The second section of the book focuses on transportation systems. First, the characteristics of transportation assets and infrastructure are shown. Then four chapters focus on the planning of transportation activities depending on who controls the transportation assets. The third section of the book is focused on storing goods, and the last section of the book is focused on supply chain systems that consider simultaneously procurement, production, and transportation, and inventory as well as the design of the supply chain infrastructure or network design. In each chapter, first a model of the process being studied is developed, followed by a description of practical solution algorithms. More advanced material is typically described in appendices. This makes it possible to use an integrated, breath-first treatment of supply chain systems by using the initial material in each chapter. A more in-depth treatment of a specific topic or process can be found towards the end of each chapter. End-of-chapter exercises are included throughout. This text is suitable for several target audiences. The first target is a course for upper-level undergraduate students on supply chains. The second target is the use in a capstone senior design project in the supply chain area. The third target is an introductory course on supply chains either in a master of engineering or a master of business administration program, and the final audience consists of students attending logistics or supply chain postgraduate or continuing education courses.
