Gladden,2017-05-13 This volume serves a resource for the design and analysis of neuroprosthetic supersystems which can be defined as organizations either small or large simple or complex whose human members have been neuroprosthetically augmented While numerous other texts focus on the biomedical engineering of neuroprostheses as technological devices or on the biocybernetic engineering of the host device system comprising a neuroprosthesis and its human host this volume presents a unique investigation of the intentional creation of higher order supersystems that allow multiple neuroprosthetically augmented human beings to interact with one another and with external information systems in order to accomplish some shared task In essence this can be understood as the work of designing and managing neuroprosthetically enhanced organizations Individual chapters present an ontology of the neuroprosthesis as a computing device a biocybernetic ontology of the host device system an ontology of the neuroprosthesis as an instrument of cyborgization motivating and inhibiting factors for the organizational deployment of posthumanizing neuroprostheses by military organizations and other early adopters an introduction to enterprise architecture in the context of technological posthumanization an exploration of the implications of neuroprosthetic augmentation for enterprise architecture and considerations for the development of effective network topologies for neuroprosthetically augmented organizations The conceptual frameworks formulated within this book offer a wide range of tools that can be of use to policymakers ethicists neuroprosthetic device manufacturers organizational decision makers and others who must analyze or manage the complex legal ethical and managerial implications that result from the use of emerging neuroprosthetic technologies within an organizational context **High Life** John B West,2013-05-27 HE history of high altitude physiology and medicine is such a rich and T colorful topic that it is perhaps surprising that no one has undertaken a comprehensive account before There are so many interesting ramifications from the early balloonists to the various high altitude expeditions culminating in the great saga of climbing Mt Everest without supplementary oxygen Underpinning this variety is the basic biological challenge of hypoxia and the ways organisms adapt to it a subject that is of key importance in medicine and many other life sciences encountered as it is by organisms throughout the animal kingdom I hope that this book will be of interest to a wide range of people from biologists and physiologists to pulmonologists and others who manage patients with hypoxemia The topic should also appeal to those who love the mountains including trekkers skiers climbers and

mountaineers The book begins with a short introductory chapter to set the scene for the non scientist It then follows a general chronological sequence beginning with the Greeks and ending with contemporary events In some places however some compromises have been made to group together areas of related interest For example in Chapter 4 the controversy about oxygen secretion is traced from the 1870s to the 1930s and includes the Anglo American Pikes Peak Expedition of 1911 and the International High Altitude Expedition to Cerro de Pasco Peru during 1921 1922 It makes sense to consider these events together
