## Chapter 6 Mechanical Properties: Part One

- 6-3** An 850-lb force is applied to a 0.15-in.-diameter nickel wire having a yield strength of 45,000 psi and a tensile strength of 55,000 psi. Determine  
(a) whether the wire will plastically deform; and  
(b) whether the wire will experience necking.

**Solution:** (a) First determine the stress acting on the wire:

$$S = F/A_0 = 850 \text{ lb} / [(\pi/4)(0.15 \text{ in.})^2] = 48,100 \text{ psi}$$

Because  $S$  is greater than the yield strength of 45,000 psi, the wire will plastically deform.

- (b) Because  $S$  is less than the tensile strength of 55,000 psi, no necking will occur.

- 6-4** A force of 100,000 N is applied to an iron bar with a cross-sectional area of 10 mm × 20 mm and having a yield strength of 400 MPa and a tensile strength of 480 MPa. Determine  
(a) whether the bar will plastically deform; and  
(b) whether the bar will experience necking.

**Solution:** (a) First determine the stress acting on the wire:

$$S = F/A_0 = 100,000 \text{ N} / [(10 \text{ mm})(20 \text{ mm})] = 500 \text{ N/mm}^2 \\ = 500 \text{ MPa}$$

Because  $S$  is greater than the yield strength of 400 MPa, the wire will plastically deform.

- (b) Because  $S$  is greater than the tensile strength of 480 MPa, the wire will also neck.

Eco-efficient Masonry Bricks and Blocks Fernando Pacheco-Torgal, Paulo B. Lourenco, Joao Labrincha, Prinya Chindaprasirt, S Kumar, 2014-11-27 Masonry walls constitute the interface between the building's interior and the outdoor environment Masonry walls are traditionally composed of fired clay bricks solid or perforated or blocks concrete or earth based but in the past and even in the present they were often associated as needing an extra special thermal and acoustical insulation layer However over more recent years investigations on thermal and acoustical features has led to the development of new improved bricks and blocks that no longer need these insulation layers Traditional masonry units fired clay bricks concrete or earth based blocks that don't offer improved performance in terms of thermal and acoustical insulation are a symbol of a low technology past that are far removed from the demands of sustainable construction This book provides an up to date state of the art review on the eco efficiency of masonry units particular emphasis is placed on the design properties performance durability and LCA of these materials Since masonry units are also an excellent way to reuse bulk industrial waste the book will be important in the context of the Revised Waste Framework Directive 2008/98/EC which states that the minimum reuse and recycling targets for construction and demolition waste CDW should be at least 70% by

2020 On the 9th of March 2011 the European Union approved the Regulation EU 305 2011 known as the Construction Products Regulation CPR and it will be enforced after the 1st of July 2013 The future commercialization of construction materials in Europe makes their environmental assessment mandatory meaning that more information related to the environmental performance of building materials is much needed Provides an authoritative guide to the eco efficiency of masonry units Examines the reuse of waste materials Covers a range of materials including clay cement earth and pumice
