unprecedented opportunity to move the energy industry into a new era of reliability availability and efficiency that will contribute to our economic and environmental health During the transition period it will be critical to carry out testing technology improvements consumer education development of standards and regulations and information sharing between projects to ensure that the benefits we envision from the Smart Grid become a reality Today an electricity disruption such as a blackout can have a domino effect a series of failures that can affect banking communications traffic and security This is a particular threat in the winter when homeowners can be left without heat A smarter grid will add resiliency to our electric power system and make it better prepared to address emergencies such as severe storms earthquakes large solar flares and terrorist attacks Because of its two way interactive capacity the Smart Grid will allow for automatic rerouting when equipment fails or outages occur This will minimize outages and minimize the effects when they do happen When a power outage occurs Smart Grid technologies will detect and isolate the outages containing them before they become large scale blackouts The new technologies will also help ensure that electricity recovery resumes quickly and strategically after an emergency routing electricity to emergency services first for example In addition the Smart Grid will take greater advantage of customer owned power generators to produce power when it is not available from utilities By combining these distributed generation resources a community could keep its health center police department traffic lights phone system and grocery stores operating during emergencies In addition the Smart Grid is a way to address an aging energy infrastructure that needs to be upgraded or replaced This book shows that Smart Grids can address energy efficiency to bring increased awareness to consumers about the connection between electricity use and the environment bring increased national security to our energy system drawing on greater amounts of home grown electricity that is more resistant to natural disasters and attack
