**Chemistry Education and Contributions from History and Philosophy of Science** Mansoor Niaz, 2015-12-23 This book explores the relationship between the content of chemistry education and the history and philosophy of science HPS framework that underlies such education It discusses the need to present an image that reflects how chemistry developed and progresses It proposes that chemistry should be taught the way it is practiced by chemists as a human enterprise at the interface of scientific practice and HPS Finally it sets out to convince teachers to go beyond the traditional classroom practice and explore new teaching strategies The importance of HPS has been recognized for the science curriculum since the middle of the 20th century The need for teaching chemistry within a historical context is not difficult to understand as HPS is not far below the surface in any science classroom A review of the literature shows that the traditional chemistry classroom curricula and textbooks while dealing with concepts such as law theory model explanation hypothesis observation evidence and idealization generally ignore elements of the history and philosophy of science This book proposes that the conceptual understanding of chemistry requires knowledge and understanding of the history and philosophy of science Professor Niaz's book is most welcome coming at a time when there is an urgently felt need to upgrade the teaching of science The book is a huge aid for adding to the usual way presenting science as a series of mere facts also the necessary mandate to show how science is done and how science through its history and philosophy is part of the cultural development of humanity Gerald Holton Mallinckrodt Professor of Physics these are valence bond VB and molecular orbital MO theories He emphasizes the importance of having rival theories and interpretations in science and its advancement He further argues that this VB MO rivalry is still alive and together the two conceptual frames serve as the tool kit for thinking and doing chemistry in creative manners The author surveys chemistry textbooks in the light of the how the books preserve or not the balance between the two theories in describing various chemical phenomena This Talmudic approach of conceptual tension is a universal characteristic of any branch of evolving wisdom As such Mansoor's book would be of great utility for chemistry teachers to examine how can they become more effective teachers by recognizing the importance of conceptual tension Sason Shaik Saeree K and Louis P Fiedler Chair in Chemistry Director The Lise Meitner Minerva Center for Computational Quantum Chemistry The Hebrew University of Jerusalem ISRAEL

**Evolving Nature of Objectivity in the History of Science and its Implications for Science Education** Mansoor Niaz, 2017-10-26 This book explores the evolving nature of objectivity in the history of science and its implications for science education It is generally considered that objectivity certainty truth universality the scientific method and the accumulation of experimental data characterize both science and science education Such universal values associated with science may be challenged while studying controversies in their original historical context The scientific enterprise is not characterized by objectivity or the scientific method but rather controversies alternative interpretations of data ambiguity and uncertainty Although objectivity is not synonymous with truth

or certainty it has eclipsed other epistemic virtues and to be objective is often used as a synonym for scientific. Recent scholarship in history and philosophy of science has shown that it is not the experimental data Baconian orgy of quantification but rather the diversity plurality in a scientific discipline that contributes toward understanding objectivity. History of science shows that objectivity and subjectivity can be considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of objectivity. The history of objectivity is nothing less than the history of science itself and the evolving and varying forms of objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others. This book is remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the supposed hallmark of the scientific method is of direct value to teachers of science. Meticulously yet in a most readable way Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in textbooks it's fascinating how certain perspectives fade while basic questions show no sign of going away. There are few books that take both philosophy and education seriously this one does. Roald Hoffmann, Cornell University chemist, writer and Nobel Laureate in Chemistry.

**Principles of Qualitative Inorganic Analysis: Precipitation, Separation and Identification of Cations** Huda S. Alhasan, Nadiyah Alahmadi, 2021-01-26

This book provides notes for basic laboratory experiments in qualitative analysis of cations. The book introduces readers to basic methods and laboratory safety. Subsequent chapters cover six groups of cations. Each chapter explains important details that are required to understand how a particular analytical method works for detecting cations in samples starting from sedimentation and ending with the identification. Key Features: Simple reader friendly format, introductory notes and summary. Covers several groups of metals. Appendix for handy reference with tables and references. This is a useful textbook for early chemistry students and teachers as it equips the readers with sufficient information required to analyze chemical samples and deduce the presence of specific cations as part of laboratory coursework.

**Multiple Representations in Chemical Education** John K. Gilbert, David Treagust, 2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education

**Waking the Power Within Thermodynamics and the Human Battery** Professor Ibrahim El-Noshokaty, The sci fi film The Matrix introduces a fascinating premise where humans function as energy sources for an advanced machine society In this fictional world human bodies are maintained in a state of suspended animation while their minds exist in a virtual reality allowing machines to extract their bioelectric thermal and kinetic energy This article investigates the scientific feasibility of utilizing humans as a power source by applying thermodynamic principles According to the first law of thermodynamics the energy required to sustain human life would result in a net energy loss for the machines The second law indicates that the system's entropy would rise rendering it an inefficient energy strategy Furthermore the energy output of a human body even if fully utilized would be inadequate to meet the machines energy demands More efficient alternatives for the machines would include other biological power sources and energy harvesting techniques such as solar or nuclear power The article

concludes that while the concept of human batteries serves as an engaging storytelling element it is not a scientifically viable solution for the machines energy requirements The machines choice to preserve human life may be motivated by other factors such as leveraging their collective cognitive abilities for computational purposes or adhering to an ethical code that prohibits the complete annihilation of humanity This investigation aims to fill the gap by providing a detailed thermodynamic analysis of the energy expenditure required to sustain human life in a suspended animation state and the inefficiency of this system as an energy source for machines a facet previously unexplored By elucidating the thermodynamic constraints of human based energy sources this study not only challenges a popular sci fi narrative but also enriches our understanding of bioenergetic processes and their implications for future energy harvesting technologies
