Terranova, 2015-10-10 What if modernism had been characterised by evolving interconnected and multi sensory images rather than by the monolithic objects often described by its artists and theorists In this groundbreaking book Charissa Terranova unearths a forgotten narrative of modernism which charts the influence that biology General Systems Theory and cybernetics had on art in the twentieth century From kinetic and interactive art to early computer art and installations spanning an entire city she shows that the digital image was a rich and expansive artistic medium of modernism

The Quantum Mechanics Conundrum Gennaro Auletta,2019-08-17 This comprehensive volume gives a balanced and systematic treatment of both the interpretation and the mathematical conceptual foundations of quantum mechanics It is written in a pedagogical style and addresses many thorny problems of fundamental physics The first aspect concerns Interpretation The author raises the central problems formalism measurement non locality and causality The main positions on these subjects are presented and critically analysed The aim is to show that the main schools can converge on a core interpretation The second aspect concerns Foundations Here it is shown that the whole theory can be grounded on information theory The distinction between information and signal leads us to integrating quantum mechanics and relativity Category theory is presented and its significance for quantum information shown the logic and epistemological bases of the theory are assessed Of relevance to all physicists and philosophers with an interest in quantum theory and its foundations this book is destined to become a classic work

The Evolution Delusion Bart Rask,2021-09-01 Does the field of evolution differ from other sciences The author a reviewer for a major medical journal scrutinized hundreds of scientific references in evolutionary literature adopting the same standards used for studies submitted for medical publication The data show that there are two types of evolution microevolution and macroevolution with a clear boundary between them based upon the presence and absence of empirical evidence respectively The surprising results show that there is a universal disconnect between the data and the conclusions that claim to show the larger changes of macroevolution The author reveals patterns of deviations from standard scientific methods in these studies For the first time evolutionary data have been summarized to describe both what evolution can and cannot accomplish The author shows the reader how to recognize the different ways in which the evidence for microevolution within and between some species differs from the unsupported macroevolution of most species Previous critiques of macroevolution have been debunked by advocates who have cited a multitude of scientific studies This book goes beyond previous critiques by directly addressing the data from these studies to see if they do in fact support macroevolution focused conclusions Many expert counterarguments against this book s thesis are presented and examined in the context of scientific research to reassure the reader that the author has left no stone unturned in the macroevolution debate A theory is proposed as to why there may be no empirical evidence for macroevolution The book concludes with a section entitled What we see differently There the author shows the reader the differences in perspective between the evolutionist and macroevolution critic as they look at and interpret the very same set of data

Age and the Reach of Sociological Imagination Dale Dannefer,2021-08-09 The dominant narratives of both science and popular culture typically define aging and human development as self contained individual matters failing to recognize the degree to which they are shaped by experiential and contextual contingencies Our understandings of age are thereby boxed in and

constricted by assumptions of normality and naturalness that limit our capacities to explore possible alternative experiences of development and aging and the conditions both individual and social that might foster such experiences Combining foundational principles of critical social science with recent breakthroughs in research across disciplines ranging from biology to economics this book offers a scientifically and humanly expanded landscape for apprehending the life course Rejecting familiar but false dichotomies such as nature vs nurture and structure vs agency it clarifies the organismic fundamentals that make the actual content of experience so centrally important in age and development and it also explores why attention to these fundamentals has been so resisted in studies of individuals and individual change and in policy and practice as well In presenting the basic principles and reviewing the current state of knowledge Dale Dannefer introduces multi levelled social processes that shape human development and aging over the life course and age as a cultural phenomenon organizing his approach around three key frontiers of inquiry that each invite a vigorous exercise of sociological imagination the Social Structural Frontier the Biosocial Frontier and the Critical Reflexive Frontier

Why Us? James Le Fanu, 2009-03-17 In this daring treatise on the current state of scientific inquiry James Le Fanu challenges the common assumption that further progress in genetic research and neuroscience must ultimately explain all there is to know about life and man's place in the world On the contrary he argues the most recent scientific findings point to an unbridgeable explanatory gap between the genes strung out along the Double Helix and the beauty and diversity of the living world and between the electrical activity of the brain and the abundant creativity of the human mind His exploration of these mysteries and his analysis of where they might lead us in our thinking about the nature and purpose of human existence form the impassioned and riveting heart of **Why Us**

Mattering Victoria Pitts-Taylor, 2016-08-30 Feminists today are reimagining nature biology and matter in feminist thought and critically addressing new developments in biology physics neuroscience epigenetics and other scientific disciplines **Mattering** edited by noted feminist scholar Victoria Pitts Taylor presents contemporary feminist perspectives on the materialist or naturalizing turn in feminist theory and also represents the newest wave of feminist engagement with science The volume addresses the relationship between human corporeality and subjectivity questions and redefines the boundaries of human non human and nature culture elaborates on the entanglements of matter knowledge and practice and addresses biological materialization as a complex and open process This volume insists that feminist theory can take matter and biology seriously while also accounting for power taking materialism as a point of departure to rethink key feminist issues The contributors an international group of feminist theorists scientists and scholars apply concepts in contemporary materialist feminism to examine an array of topics in science biotechnology biopolitics and bioethics These include neural plasticity and the brain machine interface the use of biometrical identification technologies for transnational border control epigenetics and the intergenerational transmission of the health effects of social stigma ADHD and neuropharmacology and randomized controlled trials of HIV drugs A unique and interdisciplinary collection **Mattering**

Being Modern Robert Bud, Paul Greenhalgh, Frank James, Morag Shiach, 2018-10-05 In the early decades of the twentieth century engagement with science was commonly used as an emblem of modernity This phenomenon is now attracting increasing attention in different historical specialties **Being Modern** builds on this recent scholarly interest to explore engagement with science across culture from the end of the nineteenth century to approximately 1940 Addressing the breadth of cultural forms in Britain and the western world from the architecture of Le Corbusier to working class British science fiction **Being Modern** paints a rich picture Seventeen distinguished contributors from a range of fields including the cultural study of science and technology art and architecture English culture and literature examine the issues involved The book will be a valuable resource for students and a spur to scholars to further examination of culture as an interconnected web of which science is a critical part and to supersede such tired formulations as Science and culture

Evolution Evolving Kevin N. Lala, Tobias Uller, Nathalie Feiner, Marcus Feldman, Scott F. Gilbert, 2024-09-24 A new account of the central role developmental processes play in evolution A new scientific view of evolution is emerging one that challenges and expands our understanding of how evolution works Recent research demonstrates that organisms differ greatly in how effective they are at evolving Whether and how each organism adapts and diversifies depends critically on the mechanistic details of how that organism operates its development physiology and behavior That is because the evolutionary process itself has evolved over time and continues to evolve The scientific understanding of evolution is evolving too with groundbreaking new ways of explaining evolutionary change In this book a group of leading biologists draw on the latest findings in evolutionary genetics and evo devo as well as novel insights from studies of epigenetics symbiosis and inheritance to examine the central role that developmental processes play in evolution Written in an accessible style and illustrated with fascinating examples of natural history the book presents recent scientific discoveries that expand evolutionary biology beyond the classical view of gene transmission guided by natural selection Without undermining the central importance of

natural selection and other Darwinian foundations new developmental insights indicate that all organisms possess their own characteristic sets of evolutionary mechanisms The authors argue that a consideration of developmental phenomena is needed for evolutionary biologists to generate better explanations for adaptation and biodiversity This book provides a new vision of adaptive evolution **Health Care Ethics** Benedict M. Ashley, Kevin D. O'Rourke, 1997 Previous ed has title Healthcare ethics *Subject Guide to Books in Print* , 1993
