Halskov Madsen,2013-03-09 Lars Qvortrup The world of interactive 3D multimedia is a cross institutional world Here researchers from media studies linguistics dramaturgy media technology 3D modelling robotics computer science sociology etc etc meet In order not to create a new tower of Babel it is important to develop a set of common concepts and references This is the aim of the first section of the book In Chapter 2 Jens F Jensen identifies the roots of interaction and interactivity in media studies literature studies and computer science and presents definitions of interaction as something going on among agents and agents and objects and of interactivity as a property of media supporting interaction Similarly he makes a classification of human users avatars autonomous agents and objects demonstrating that no universal differences can be made We are dealing with a continuum While Jensen approaches these categories from a semiotic point of view in Chapter 3 Peer Mylov discusses similar issues from a psychological point of view Seen from the user s perspective a basic difference is that between stage and back stage or rather front stage i e between the real I and we and the virtual representational I and we Focusing on the computer as a stage in Chapter 4 Kjölner and Lehmann use the theatre metaphor to conceptualize the stage phenomena and the relationship between stage and front stage

**Interactive Multimedia Learning Environments** Max Giardina,2012-12-06 Multimedia environments suggest to us a new perception of the state of changes in and the integration of new technologies that can increase our ability to process information Moreover they are obliging us to change our idea of knowledge These changes are reflected in the obvious synergetic convergence of different types of access communication and information exchange The multimedia learning environment should not represent a passive object that only contains or assembles information but should become on one side the communication medium of the pedagogical intentions of the professor designer and on the other side the place where the learner reflects and where he or she can play with test and access information and try to interpret it manipulate it and build new knowledge The situation created by such a new learning environments that give new powers to individuals particularly with regard to accessing and handling diversified dimensions of information is becoming increasingly prevalent in the field of education The old static equilibrium in which fixed roles are played by the teacher including the teaching environment and the learner is shifting to dynamic equilibrium where the nature of information and its processing change depending on the situation the learning context and the individual s needs
